

SAP NetWeaver Visual Composer

Creating a Wizard

Creating a Wizard (1/2)

1. Creating a Wizard

- Start with the basic model as shown on the right
- Choose **Compose** from the task-panel toolbar and create three layers (such as Enter Country, Select Bank, and View Details)
- Change the model accordingly as shown on the right

Creating a Wizard (2/2)

2. Creating a Wizard

- Create transitions by choosing the different layers and dragging the green dot to build a connection between the layers
- Create buttons for the different steps using custom events accordingly to the Popup iView example
- The model should look similar to the one on the right
- **Note:** There is a build-in event for going one step back
