

# How to transfer custom fields from SRM to ECC

## Applies to:

SRM5 <-> SAP ECC6.

## Summary

In the shopping cart of your SRM system some custom fields in the position of the requisition are required.

The field-content entered during purchasing shall be transferred to the according customer fields in the purchase requisition or purchase order in the backend system.

In this example two customer fields are created in both SRM and backend and are transferred to the Purchase requisition respectively purchase order.

## Requirement

In the shopping cart of your SRM system you need some custom fields in the position of the requisition.

SRM:

im Budget enthalten	<input checked="" type="checkbox"/>
Budgetnummer	1256-67

The field-content entered during purchasing shall be transferred to the according customer fields in the purchase requisition or purchase order in the backend system.

Purchase order:

im Budget enthalten	<input checked="" type="checkbox"/>
Budgetnummer	1256-67

In this example 2 customer fields are created.

## Solution

### Create a customer field in the shopping cart

Look at Note 672960 for SRM5 (for SRM < 4.0 SAPNOTE 458591) how to create a customer field

Transaction SE11: Create an append structure for "INCL\_EEW\_PD\_ITEM\_CSF\_SC"

Struktur	INCL_EEW_PD_ITEM_CSF_SC	aktiv				
Kurzbeschreibung	Kunden-Erweiterungen an der Einkaufswagen-Position					
Eigenschaften		Komponenten				
Eigenschaften		Eingabehilfe/-prüfung				
Eigenschaften		Währungs-/Mengenfelder				
Eingegebauter Typ						
1 / 4						
Komponente	R.typ	Komponententyp	Datentyp	Länge	DezSt...	Kurzbeschreibung
DUMMY_EEW_PDISC	<input type="checkbox"/>	DUMMY	CHAR	1	0	Dummyfunktion in der Laenge 1
.APPEND	<input type="checkbox"/>	ZZINCL_EEW_PD_IT...	...	0	0	ZZINCL_EEW_PD_ITEM_CSF_SC
ZZ_BUDGETFLAG	<input type="checkbox"/>	Z_BUDGETFLAG	CHAR	1	0	Budgetprüfung
ZZ_BUDGET	<input type="checkbox"/>	Z_BUDGET	CHAR	12	0	Budgetnummer

Also create an append structure for „INCL\_EEW\_PD\_ITEM\_CSF“ (When this append does not exist, the values entered in the shopping cart are not saved)

Struktur	INCL_EEW_PD_ITEM_CSF	aktiv				
Kurzbeschreibung	Kunden-Erweiterungen an der Position					
Eigenschaften		Komponenten				
Eigenschaften		Eingabehilfe/-prüfung				
Eigenschaften		Währungs-/Mengenfelder				
Eingegebauter Typ						
1 / 4						
Komponente	R.typ	Komponententyp	Datentyp	Länge	DezSt...	Kurzbeschreibung
DUMMY_EEW_PDISC	<input type="checkbox"/>	DUMMY	CHAR	1	0	Dummyfunktion in der Laenge 1
.APPEND	<input type="checkbox"/>	ZZINCL_EEW_PD_IT...	...	0	0	ZZINCL_EEW_PD_ITEM_CSF
ZZ_BUDGETFLAG	<input type="checkbox"/>	Z_BUDGETFLAG	CHAR	1	0	Budgetprüfung
ZZ_BUDGET	<input type="checkbox"/>	Z_BUDGET	CHAR	12	0	Budgetnummer

For the customer field ZZ\_BUDGETFLAG here a component type Z\_BUDGETFLAG has been created, that points to the domain „XFELD“, this ensures that the field appears on the screen as a checkbox.

### Code sample, optional – the fields are only shown during approval of the shopping cart

In SE19 implement the BAdi BBP\_CUF\_BADI\_2, method MODIFY\_SCREEN

```
METHOD IF_EX_BBP_CUF_BADI_2~MODIFY_SCREEN.
**-----
** Description : This BADI implementation enables/disables
**                 the customer fields
**-----*
```

```

DATA: WA_FIELDS          TYPE BBPS_CUF_DISPLAY.
DATA: LT_ITEM             TYPE TABLE OF BBP_PDS_SC_ITEM_D.
DATA: WA_ITEM              TYPE BBP_PDS_SC_ITEM_D.

DATA: LT_STATUS         TYPE TABLE OF BBP_PDS_STATUS.
DATA: WA_STATUS         LIKE LINE OF LT_STATUS.
DATA: LV_STATUS_APPROVE TYPE C.

* Positionen
CALL FUNCTION 'BBP_PD_SC_GETDETAIL'
  EXPORTING
    I_GUID           = IV_DOC_GUID
    I_WITH_ITEMDATA = 'X'
  TABLES
    E_ITEM           = LT_ITEM
    E_MESSAGES       = LT_MESSAGES
    E_STATUS         = LT_STATUS.

.
* Status des Einkaufskorbs -
nur bei "In Genehmigung" soll geprüft werden (Tabelle TJ02)
LOOP AT LT_STATUS INTO WA_STATUS.
  IF WA_STATUS-STAT EQ 'I1015' AND WA_STATUS-INACT IS INITIAL.
    LV_STATUS_APPROVE = 'X'.
  ENDIF.
ENDLOOP.

* Meldungen löschen
CLEAR LT_MESSAGES.

* Wenn Budget nicht geprüft wurde -> Fehler
LOOP AT LT_ITEM INTO WA_ITEM.
  IF LV_STATUS_APPROVE = 'X'.
    IF WA_ITEM-ZZ_BUDGETFLAG IS INITIAL.
      WA_MESSAGES-MSGTY = 'E'.
      WA_MESSAGES-MSGID = 'BBP_PD'.
      WA_MESSAGES-MSGNO = 950.
      APPEND WA_MESSAGES TO LT_MESSAGES.
    ENDIF.
    IF WA_ITEM-ZZ_BUDGET IS INITIAL.
      WA_MESSAGES-MSGTY = 'E'.
      WA_MESSAGES-MSGID = 'BBP_PD'.
      WA_MESSAGES-MSGNO = 951.
      APPEND WA_MESSAGES TO LT_MESSAGES.
    ELSE.
      ENDIF.
    ENDIF.
  ELSE.
    ENDIF.
  ENDIF.

```

```

ENDLOOP.

* Meldungen ins Log, falls vorhanden
CALL FUNCTION 'BBP_PDH_PO_ADD_TO_MSG_LOG'
  TABLES
    IT_MESSAGE = LT_MESSAGES.

```

## Code sample, optional – set shopping cart to edit mode during approval

Please see also this SDN-thread: <https://www.sdn.sap.com/irj/scn/thread?forumID=346&threadID=1317783>

In SE19 replace the standard implementation „BBP\_WFL\_SECUR\_BADI\_S“ of BAdI „BBP\_WFL\_SECUR\_BADI“, method „SET\_SECURITY\_LEVEL“ by an own.

Here the only difference between the standard implementation and the z-implementation the if-clause „if scenario is initial“ is commented out.

```

method IF_EX_BBP_WFL_SECUR_BADI~SET_SECURITY_LEVEL.

  if object_type eq 'BUS2121'.
*** This BADI is called in two main scenarios:
*** 1) To determine if the business object could be changed. The
***     variable scenario is filled in this case.
*** 2) To find out if the workflow should be restarted ( in
***     case of security level "medium" this depends also from
***     starting conditions.
*** The variable scenario is initial only in case 2)
*   if scenario is initial .
    call function 'BBP_PDH_WFL_SECLEVEL_DB_GET'
      exporting
        iv_user      = actual_user
      importing
        ev_sec_level = new_sec_level.

    if new_sec_level is initial.
      new_sec_level = 4.
    endif.
* endif.
endif.

```

Using this implementation the personalization of the User (in SU01) does exactly what it promises.

Personalization object key: BBP\_WFL\_SECURITY

create PBO Modul

( In the Topinclude of the exits belonging to SAPLXM06 a field „gv\_trtyp“ is defined. The field holds the activity mode (display, change)

```
gv_trtyp = i_trtyp.
```

So the value can be used in the PBO module to determine the mode and to set the screen-input accordingly

```

module STATUS_0111 output.

* Feldsteuerung
LOOP AT SCREEN.

* when display-mode
  IF screen-group1 = 'SRM'.
    IF gv_trtyp = 'A'.
      screen-input = 0.
    ELSE.
      screen-input = 1.
    ENDIF.
    MODIFY SCREEN.
  ENDIF.

ENDLOOP.

* SET PF-STATUS 'xxxxxxxx'.
* SET TITLEBAR 'xxx'.

endmodule.          " STATUS_0111  OUTPUT

```

In SAP-Enhancement MM06E005 implement the exit „EXIT\_SAPMM06E\_016“, Include „ZXM06U41“ (PBO)

```

*&-----*
*&  Include      ZXM06U41
*&-----*

```

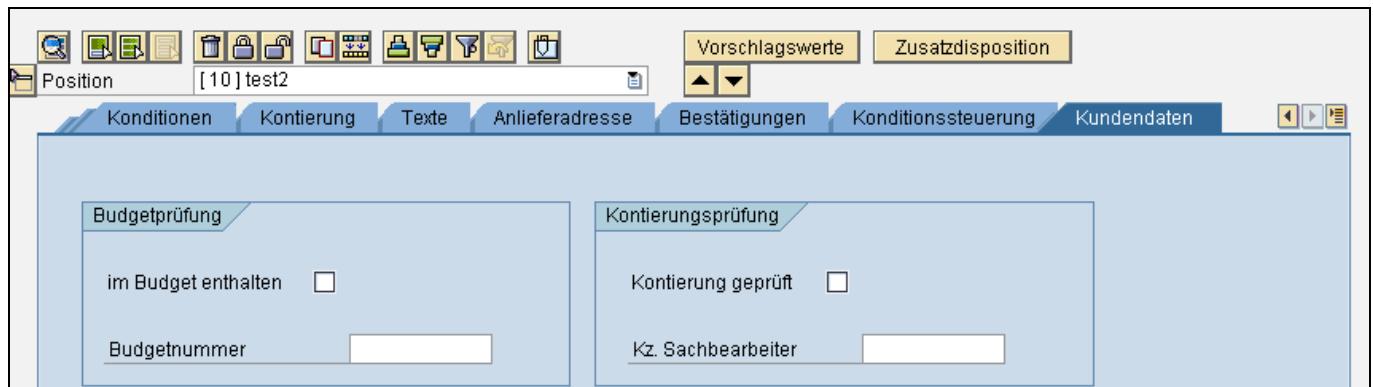

```
* DB -> Screen
move-corresponding i_ekpo to ekpo_ci.
```

In SAP-Enhancement MM06E005 implement the exit „EXIT\_SAPMM06E\_018“, Include „ZXM06U40“ (PAI)

```
*&-----*
*& Include           ZXM06U40
*&-----*

if e_ci_ekpo <> ekpo_ci.
  e_ci_update = 'X'.
  move-corresponding ekpo_ci to e_ci_ekpo.
endif.
```

Looks like this in the PO:

activate the enhancement

## Create customer fields in the purchase requisition in the backend

Read the documentation of Enhancement MEREQ001 (Transaction SMOD)

In SE11 display table EBAN, create structure CI\_EBANDB

Here no structure CI\_EBANDBX is needed

## Dictionary: Struktur pflegen

Struktur: CI\_EBANDB neu(überarbeitet)

Kurzbeschreibung: Kundenfelder

Struktur: CI\_EBANDB teilaktiv

Kurzbeschreibung: Kundenfelder

In SAP-Enhancement MEREQ001 implement the exit „EXIT\_SAPLREQ\_001“, Include „ZXM02U01“ (PBO)

Here in the Top Include (global data of the exit) ZXM02TOP the field „gv\_trtyp“ is defined holding the activity mode. The mode can be used in the PBO module of dynpro 111 (pls see above).

```
*&-----*
*&  Include          ZXM02U01
*&-----*

* Schreiben aus DB in den Screen

TABLES : ci_ebandb, eban.
DATA : lv_mereq_item TYPE mereq_item.

* Welcher Modus ?
CALL METHOD im_req_item->get_activity
RECEIVING
    re_aktvt = gv_trtyp.

IF im_req_item IS INITIAL.
    CLEAR: ci_ebandb.
ELSE.
    lv_mereq_item = im_req_item->get_data( ).
    MOVE-CORRESPONDING lv_mereq_item TO eban.
ENDIF.
```

In SAP-Enhancement MEREQ001 implement the exit „EXIT\_SAPLREQ\_003“, Include „ZXM02U03“ (PAI)

```
*&-----*
*&  Include          ZXM02U03
*&-----*

* Schreiben von Screen in DB

DATA: lv_req_item TYPE mereq_item.
DATA: re_aktvt TYPE aktvt.

CALL METHOD im_req_item->get_data
RECEIVING
    re_data = lv_req_item.

* Welcher Modus ?
CALL METHOD im_req_item->get_activity
RECEIVING
    re_aktvt = re_aktvt.
```

```

CASE re_aktvt.
* Display mode
  WHEN 'A'.
* Change mode
  WHEN 'V'.
    lv_req_item-zz_budget = eban-zz_budget.
    lv_req_item-zz_budgetflag = eban-zz_budgetflag.
    CALL METHOD im_req_item->set_data
      EXPORTING
        im_data = lv_req_item.
    ex_changed = 'X'.
ENDCASE.

```

## When transporting to the consolidation or production system activate both enhancements

MREQ001 und MM06E005

## Transfer PurchREQ: Implement BAdi „BBP\_CREATE\_BE\_RQ\_NEW“, Method „FILL\_RQ\_INTERFACE“

Tip:

In the SRM system this BAdi is called with user „WF-BATCH“. Set a breakpoint for his user in your implementation. After having sent a requisition from SRM to the backend a debugger will come up. (Perhaps you have to make the user WF-BATCH a dialog user before)

In the backend the BAPI „ is called. You can debug it there with user „SRM\_MGR“.

```

METHOD IF_EX_BBP_CREATE_BE_RQ_NEW~FILL_RQ_INTERFACE.

  DATA LT_SC_ITEM      TYPE BBPT_PD_TRANSFER_ITEM.
  DATA WA_SC_ITEM      LIKE LINE OF LT_SC_ITEM.
  DATA LT_EXTENSION    TYPE TABLE OF BAPIPAREX.
  DATA WA_EXTENSION    LIKE LINE OF LT_EXTENSION.
  DATA LV_ITEMNUMBER   TYPE BNFPO.

  LOOP AT IS_SC_DOCUMENT-ITEM INTO WA_SC_ITEM.

    CONCATENATE WA_SC_ITEM-NUMBER_INT+6(4) '0' INTO LV_ITEMNUMBER.
* Extensionstruktur füllen
    WA_EXTENSION-STRUCTURE = 'BAPI_TE_REQUSITION_ITEM'.
* Positionnumber (5)=00010, Fieldcontent of ZZ-BUDGETFLAG=X, Fieldcontent
of ZZ_BUDGET=1234567
* example WA_EXTENSION-VALUEPART1 = 00010X1234567
    CONCATENATE LV_ITEMNUMBER WA_SC_ITEM-ZZ_BUDGETFLAG WA_SC_ITEM-
ZZ_BUDGET INTO WA_EXTENSION-VALUEPART1 RESPECTING BLANKS.
    APPEND WA_EXTENSION TO LT_EXTENSION.
    CLEAR WA_EXTENSION.

  CS_RQ_DOCUMENT-IT_EXTENSIONIN = LT_EXTENSION.

```

```

ENDLOOP.

ENDMETHOD.
```

## Transfer Purchase Order: Implement BAdi „BBP\_CREATE\_BE\_PO\_NEW“, Method „FILL\_PO\_INTERFACE1“

Tip:

In the SRM system this BAdi is called with user „WF-BATCH“. Set a breakpoint for his user in your implementation. After having sent a requisition from SRM to the backend a debugger will come up. (Perhaps you have to make the user WF-BATCH a dialog user before)

In the backend the BAPI „BAPI\_PO\_CREATE1“ is called. You can debug it there with user „SRM\_MGR“.

```

METHOD IF_EX_BBP_CREATE_BE_PO_NEW~FILL_PO_INTERFACE1.

DATA LT_SC_ITEM      TYPE BBPT_PD_TRANSFER_ITEM.
DATA WA_SC_ITEM      LIKE LINE OF LT_SC_ITEM.
DATA LT_EXTENSION    TYPE TABLE OF BAPIPAREX.
DATA WA_EXTENSION    LIKE LINE OF LT_EXTENSION.
DATA LV_ITEMNUMBER   TYPE BNFPO.

LOOP AT IS_SC_DOCUMENT-ITEM INTO WA_SC_ITEM.

  CONCATENATE WA_SC_ITEM-NUMBER_INT+6(4) '0' INTO LV_ITEMNUMBER.
* Extensionstruktur füllen
  WA_EXTENSION-STRUCTURE = 'BAPI_TE_MEPOITEM'.
* Positionnumber (5)=00010, Fieldcontent of ZZ-BUDGETFLAG=X, Fieldcontent
of ZZ_BUDGET=1234567
* example WA_EXTENSION-VALUEPART1 = 00010X1234567
  CONCATENATE LV_ITEMNUMBER WA_SC_ITEM-ZZ_BUDGETFLAG WA_SC_ITEM-
ZZ_BUDGET INTO WA_EXTENSION-VALUEPART1 RESPECTING BLANKS.
  APPEND WA_EXTENSION TO LT_EXTENSION.
  CLEAR WA_EXTENSION.

* X-Struktur füllen - needed for PO
  WA_EXTENSION-STRUCTURE = 'BAPI_TE_MEPOITEMX'.
  CONCATENATE LV_ITEMNUMBER 'XX' INTO WA_EXTENSION-
VALUEPART1 RESPECTING BLANKS.
  APPEND WA_EXTENSION TO LT_EXTENSION.
  CLEAR WA_EXTENSION.

CS_PO1_DOCUMENT-IT_EXTENSIONIN = LT_EXTENSION.

ENDLOOP.

ENDMETHOD.
```
