

Dear Partner,

We hope that the questions in this document will help you prepare for a productive kick-off meeting with your SAP Integration and Certification Center consultant to start the certification process.

You do not have to have all the answers ready right away, but please ensure that a technical contact person is present during the call to discuss below aspects.

Of course if you can share this information prior to the call, it will help us prepare better, as well.

Thank you,

SAP ICC

Questionnaire

Part I. Identification of Product(s)

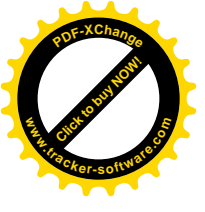

1. Please list the names of all the products (software components – i.e. Client applications, server applications, backend application etc.) that can be identified as a single entity, and are a part of the solution.
2. If mobile applications are delivered as individual applications, then please list all the applications.
3. Please describe the typical use case of the application (i.e. the business process) including the integrated SAP functionality, if any.

Part II. System Architecture and Technology

1. Please provide a diagram of the entire system (including the components that are not involved in the SAP integration) that constitutes the product including the data/information flow between different components. Please include every component that was identified in part I.
2. In the diagram above please indicate the technology used for the data/information flow (i.e. DOE Connector, Java Connector, HTTP, SOAP, XML, JDBC etc.).
3. Please list the supported mobile platforms and development environment used to develop mobile application (i.e. mobile UI).

Part III. Sybase Unwired Platform

1. Which SUP release are you using?
2. List the MBOs that are developed and their functionality.

Part IV. Backend System

SAP Backend - Standard SAP delivered Objects

Please answer, if applicable to your app(s).

1. Please list all the BAPIs/ Remote Function Call (RFC) used.
2. Please list all the SAP Enterprise Services used.

SAP Backend - New Development Objects implemented in ABAP

Please answer, if applicable to your app(s).

1. Please list new BAPIs and BAPI wrappers implemented and their functionality.
2. Please list the new function modules (RFC) and their functionality
3. Please let us know, if these developments are already in your company's own ABAP development namespace (this will help us estimate a certification timeline)
4. Please let us know, if you already have an ABAP development license, or if we need to provide it as part of the certification project

Non-SAP Backend

Please answer, if applicable to your app(s).

1. Please list the backend systems used.
2. Please list the new functionalities developed.
