Introduction

This article explains the steps to necessary to increase the session timeout in BusinessObjects Enterprise. This article is specific to BusinessObjects XI 3.1 SP3. It does not apply to BusinessObjects Enterprise XI Release 2.

Tomcat Application

Log into the BusinessObjects server. Perform the following steps.

1. Go to Program Files\Business Objects\BusinessObjects Enterprise 12.0\warfiles\WebApps \InfoViewApp\WEB-INF
2. Open web.xml in a text editor.
3. Change the session-timeout value to the one desired. The default value is 20 minutes.

```
<session-config>
    <session-timeout>45</session-timeout>
    <!-- 20 minutes for session objects -->
</session-config>
```

Similarly, modify web.xml on the following folders:

- AdminTools
- AnalyticalReporting
- CmcApp
- CmcAppActions
- CrystalReports
- InfoViewAppActions
- PartnerPlatformService
- PerformanceManagement
- PlatformServices
- VoyagerClient
- Xcelsius

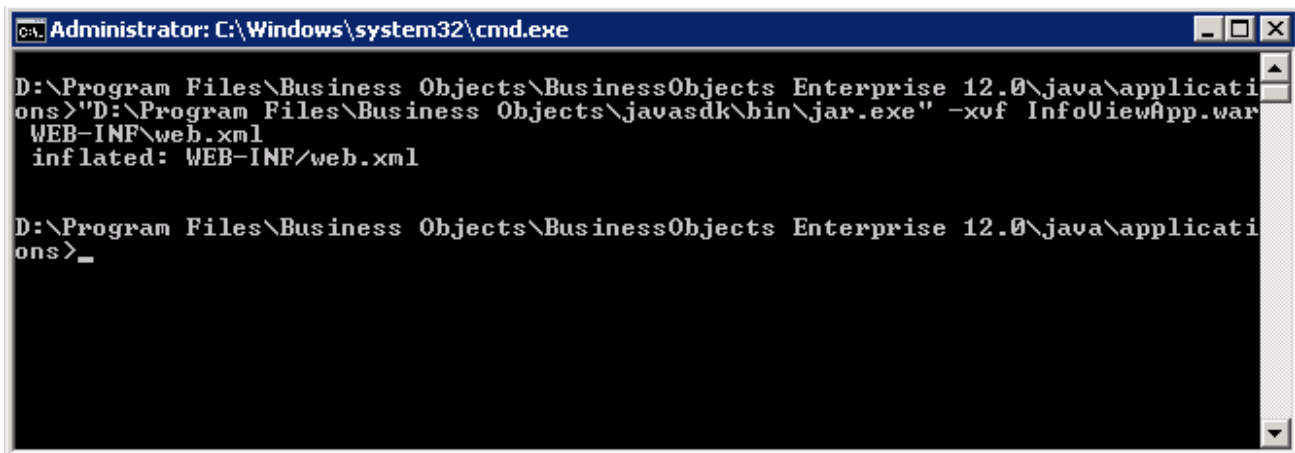

WebLogic Application

If WebLogic is used as web application then modify the web.xml in war files by using jar.exe command.

1. Open up Command Prompt and got to Program Files\Business Objects\BusinessObjects Enterprise 12.0\Java\Application and run the below command

```
"D:\Program Files\Business Objects\javasdk\bin\jar.exe" -xvf InfoViewApp.war WEB-INF\web.xml
```

Note: Do not remove the double quotes.

```
Administrator: C:\Windows\system32\cmd.exe

D:\Program Files\Business Objects\BusinessObjects Enterprise 12.0\java\applications>"D:\Program Files\Business Objects\javasdk\bin\jar.exe" -xvf InfoViewApp.war WEB-INF\web.xml
inflated: WEB-INF/web.xml

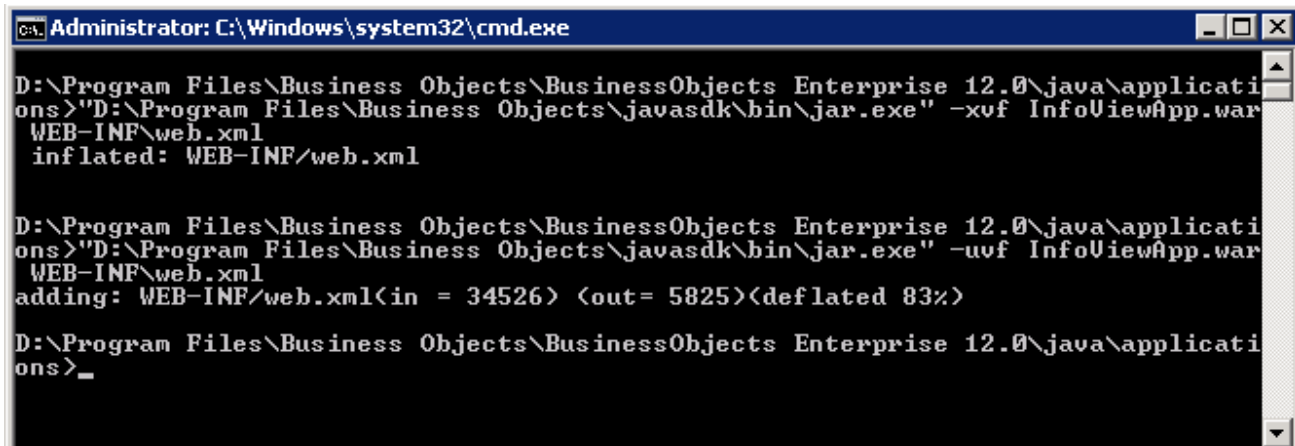

D:\Program Files\Business Objects\BusinessObjects Enterprise 12.0\java\applications>_
```

This will extract the web.xml from the war file, now edit the xml and change the session-timeout.

```
<session-timeout>20</session-timeout>
```

2. Once web.xml is saved, run the following command to update the InfoViewApp war file with the updated web.xml.

```
"D:\Program Files\Business Objects\javasdk\bin\jar.exe" -uvf InfoViewApp.war WEB-INF\web.xml
```

```
Administrator: C:\Windows\system32\cmd.exe

D:\Program Files\Business Objects\BusinessObjects Enterprise 12.0\java\applications>"D:\Program Files\Business Objects\javasdk\bin\jar.exe" -xvf InfoViewApp.war WEB-INF\web.xml
inflated: WEB-INF/web.xml

D:\Program Files\Business Objects\BusinessObjects Enterprise 12.0\java\applications>"D:\Program Files\Business Objects\javasdk\bin\jar.exe" -uvf InfoViewApp.war WEB-INF\web.xml
adding: WEB-INF/web.xml(in = 34526) (out= 5825)(deflated 83%)

D:\Program Files\Business Objects\BusinessObjects Enterprise 12.0\java\applications>_
```

Similarly modify the other war files mentioned above and deploy it to WebLogic using wdeploy.

Change Properties through CMC

Once the warfiles are updated, log into the Central Management Console (CMC) and do the below changes.

1. Go to Servers. Right-click Web Intelligence Processing Server.
2. Select Properties. Change "Idle Connection Timeout" to 45 minutes. Click Save & Close.

Idle Connection Timeout (minutes):

3. Right-click Crystal Reports Processing Server.
4. Select Properties. Change "Idle Connection Timeout" to 45 minutes. Click Save & Close button.
5. Right-click Desktop Intelligence Processing Server.
6. Select Properties. Change "Idle Connection Timeout" to 45 minutes. Click Save & Close button.
7. Navigate to Home. Click Applications under Manage.
8. Right-click on Web Intelligence. Select Properties. Change the 'Auto-save time delay' to 2700 seconds. By default, this is 600 seconds.

Auto-save time delay seconds

IMPORTANT: The following step involves editing the registry. Using the Registry Editor incorrectly can cause serious problems. Use the Registry Editor at your own risk. Please refer to [Knowledge Base article 1323322](#) for more information.

9. Open the Registry Editor. (Click Start > Programs > Run > type "regedit".) Modify the following values:

HKEY_LOCAL_MACHINE\SOFTWARE\Business Objects\Suite 12.0\CMS\Instances\cmsname.cms,
Change IdleSessionTimeout=2700000

HKEY_LOCAL_MACHINE\SOFTWARE\BusinessObjects\Suite
12.0\default\WebIntelligence\Server\Admin\SwapTimeOut to 2700000.(Only if WebIntelligence
reports timeout)
