

## ***Installing a credential for Adobe Document Services***

In order to work with Adobe Document Services you need to install a valid credential. A preliminary credential is included in this download.

To install a credential perform following steps:

- Create a subdirectory named **trust** below the `c:\usr\sap\J2E\JC00\j2ee\cluster\server0\persistent\com.adobe~TrustManagerService` directory
- Create a subdirectory named **credentials** below the **trust** directory created in the previous step
- Copy the credential file *filename.pfx* (located at [<zip extract folder>\SAPNetWeaver04SneakPreviewJavaSP11\ADSCredentialFiles](#)) to the `c:\usr\sap\J2E\JC00\j2ee\cluster\server0\persistent\com.adobe~TrustManagerService\trust\credentials` directory

Register the password for credential as described below:

- Log on to the Visual Administrator (`C:\usr\sap\J2E\JC00\j2ee\admin\go.bat`)
- On the Cluster tab, choose Server 0 -> Services -> Document Services Configuration
- On the **Runtime** tab, select **Credentials**
- Choose **Browse** to search for the name of the credential and then **Select**
- In the **Alias** field, enter the alias of the credential you installed, for example **ReaderRights**. (Entries for the name of the credential are case-sensitive)
- In Password field, enter the password you received together with the credential you installed (*filename.txt* in [<zip extract folder>\SAPNetWeaver04SneakPreviewJavaSP11\ADSCredentialFiles](#)). Confirm the password again and then click **Add**
- Restart the following services for the changes to take effect: **PDF Manipulation Module, Document Services Trust Manager**
- Restart also the application **com.adobe/AdobeDocumentServices**

An Adobe Document Services demo application is installed at:

[http://localhost:50000/webdynpro/dispatcher/local/TutWD\\_OnlineInteractiveForm/OnlineInteractiveFormApp](http://localhost:50000/webdynpro/dispatcher/local/TutWD_OnlineInteractiveForm/OnlineInteractiveFormApp)
