English only.

Supported Operating Systems

BusinessObjects Data Quality XI for Oracle's PeopleSoft Campus Solutions 8.9

- Windows 2000 SP4 Advanced Server
- Windows 2000 SP4 Datacenter Server
- Windows 2000 SP4 Server
- Windows 2000 SP4 Professional
- Windows XP SP2 Professional
- Windows Server 2003 SP1 Standard Edition
- Windows Server 2003 SP1 Enterprise Edition
- Windows Server 2003 SP1 Datacenter Edition
- Windows Server 2003 SP1 Web Edition

Minimum Hardware Requirements

BusinessObjects Data Quality XI for Oracle's PeopleSoft Campus Solutions 8.9

The Data Quality connector for PeopleSoft Campus Solutions requires that you have:

- Pentium processor* with a minimum of 256 MB RAM (512 recommended).

Data Quality Connector Component:

- The amount of hard disk space required will vary depending on your database system and overall PeopleSoft environment configuration.
- The Connector component files must be installed to a server that can be access by a Windows-based client. In most cases, this is the file server.

Data Quality XI Release 2* - version [11.5.1](#)

- All system requirements are defined within the Windows document for Data Quality XI.

*Windows support is limited strictly to AMD/Intel chipsets.

BusinessObjects Data Quality connector software for Windows is not warranted or supported for use on other chipsets. BusinessObjects Data Quality connector software for Windows can be run on Windows 64-bit operating systems on Intel chipsets if it can reference the 32-bit operating system libraries as well as the 32-bit database and application client libraries.

Business Objects and Microsoft Critical Patches

Business Objects supports and recommends installation of all MSFT critical patches for the operating systems listed above.

Enterprise Application Support

Data Source	Version	Client	Repo	Source	Target
PeopleSoft Campus Solutions	8.9	N/A		x	x

Web Server Connectivity

You must have a web server to host the Data Quality Web Service. You can use any of the web servers supported in Data Quality, as long as they support Java Web Services. The following list shows some examples of web servers that meet this requirement.

- Internet Information Services (IIS) version 5.x or higher.

- Apache Tomcat 5.x or higher
- Sun Java System Application Server 8.1

Java Requirements

Certain files in the Java Developer's Kit are used by Apache Tomcat to host the Data Quality Web Service. These software packages must be acquired and installed on the same machine that will host the Data Quality Server:

- Java 2 Platform, Standard Edition (J2SE) version 1.5 or higher.
- Java WSDP 1.6 or higher.

COBOL Compatibility

Applies only to UNIX servers, when processing international addresses:

On UNIX platforms, Data Quality uses a COBOL runtime environment to process international addresses. Your PeopleSoft application or batch server also uses a COBOL runtime environment. If the two runtime environments are different versions and are installed on the same machine, they may be incompatible.

See the Installation and Users Guide document for Data Quality XI for PeopleSoft Campus Solutions for details.
