## Connectivity Notes

### Scheduled and on demand reporting

Schedule only indicates that the data connectivity is assumed to be single-threaded. Customers are recommended to use these with scheduled Crystal Reports instances; as concurrent on-demand reports will be handled serially.

Other connectivity are assumed to be multi-threaded and suitable to be used for both scheduled and on-demand Crystal Reports instances as concurrent on-demand reports will be handled in parallel.

### Support of SAP BW Server

Business Objects XI R2 Integration Kit for SAP MUST be installed in order to use SAP BW Server as a data source from Crystal Reports and Web intelligence. The exact patch levels required for SAP BW servers and API are specified in the platforms.txt for Business Objects XI R2 Integration Kit for SAP.

Business Objects XI R2 Integration Kit for SAP with the latest SP2 patch MUST be installed for Voyager to work with SAP BW as a data source.

### Generic ODBC, OLEDB and JDBC: Limitation

Database server, Client and ODBC/JDBC/OLEDB driver used must support multiple threads.

Generic JDBC: 3rd Party JDBC Type 4-compliant drivers may potentially have issues as not all combinations have been tested, but are supported for \*relational database access\* as a general rule.

Generic ODBC: 3rd Party ODBC Level 2-compliant Drivers may potentially have issues as not all combinations have been tested yet, but are supported as a general rule.

### Data Integrator Database Connectivity Support policy

Data Integrator RDBMS support is defined by the version of the database client interface. Any database client interface supported by Data Integrator will be supported in any client-server combination which is supported by the database vendor. If a vendor announces that they will discontinue support, Data Integrator must discontinue on-going support for that database.

Data Integrator supports all client interfaces listed in this document and client interfaces that are compatible with versions listed.

Unless explicitly stated otherwise, all database versions refer to the generally available versions provided by the vendor for an "x.x" release.

### Data Integrator Database Connectivity Limitation

Due to the driver limitation of supporting multiple connections, the following RDBMS are not supported with Data Integrator through DataDirect Technologies ODBC Connect Driver on Linux: DB2, AS/400, and Btrieve.

### Data Integrator Technology Connectivity

Data Integrator supports XML Schema version 1.0 as defined by W3c.org.
