	Recommendation
	Syntax

Additional icons are used in SAP Library documentation to help you identify different types of information at a glance. For more information, see *Help on Help* → *General Information Classes and Information Classes for Business Information Warehouse* on the first page of any version of *SAP Library*.

Typographic Conventions

Type Style	Description
<i>Example text</i>	Words or characters quoted from the screen. These include field names, screen titles, pushbuttons labels, menu names, menu paths, and menu options. Cross-references to other documentation.
Example text	Emphasized words or phrases in body text, graphic titles, and table titles.
EXAMPLE TEXT	Technical names of system objects. These include report names, program names, transaction codes, table names, and key concepts of a programming language when they are surrounded by body text, for example, SELECT and INCLUDE.
Example text	Output on the screen. This includes file and directory names and their paths, messages, names of variables and parameters, source text, and names of installation, upgrade and database tools.
Example text	Exact user entry. These are words or characters that you enter in the system exactly as they appear in the documentation.
<Example text>	Variable user entry. Angle brackets indicate that you replace these words and characters with appropriate entries to make entries in the system.
EXAMPLE TEXT	Keys on the keyboard, for example, F2 or ENTER.

Introduction

This guide does not replace the daily operations handbook that we recommend customers to create for their specific productive operations.

Target Audience

- Technology consultants
- System administrators

This document is not included as part of the Installation Guides, Configuration Guides, Technical Operation Manuals, or Upgrade Guides. Such guides are only relevant for a certain phase of the software life cycle, whereby the Security Guides provide information that is relevant for all life cycle phases.

Why Is Security Necessary?

With the increasing use of distributed systems and the Internet for managing business data, the demands on security are also on the rise. When using a distributed system, you need to be sure that your data and processes support your business needs without allowing unauthorized access to critical information. User errors, negligence, or attempted manipulation on your system should not result in loss of information or processing time. These demands on security apply likewise to the *RFID-Enabled Slap & Ship Outbound Processing* business process. To assist you in securing this business process, we provide this Security Guide.

About this Document

The Security Guide provides an overview of the security-relevant information that applies to this business process. The business process is based on a relatively simple system landscape. Most security-relevant information is already covered by different component security guides mentioned in this document. Therefore, this Security Guide only gives an overview of the relevant Component Security Guide you ought to consult for this business process.

Before You Start

Fundamental Security Guides

The *RFID-Enabled Slap & Ship Outbound Processing* business process is based on the component SAP Auto-ID Infrastructure 4.0 (SAP All 4.0). Therefore, the corresponding Component Security Guide also applies to the business process.

For a complete list of the available SAP Security Guides, see the Quick Link [securityguide](#) on the SAP Service Marketplace.

Additional Information

You can find more information about this business process in SAP Solution Manager, Implementation Content release ST-ICO 150.

For more information about specific topics, see the Quick Links as shown in the table below.
