License Key Assignment

License Key Request for Release 2004 A

- Visit SAP Service Marketplace
<http://service.sap.com/licensekey>
- Choose `SAP Solutions for Small and Midsize Businesses`
- Click the `Request license key` button
- Partner installations and customer installations appear
- Select the installation you want to request a license key for

Contents

1. Request a new system
2. Request for an existing system/Upgrade
3. Frequently asked questions
4. Additional information

1. Request a new system – First Step

- Click the `Request new system` button to request a new system
- Insert the details of the new system
 - Release – choose 2004
 - System type
 - Hardware key
 - Database
 - Operating system
- Press `Next Step`

1. Request a new system – Second Step

- Add new components to the system
 - Professional Users*
 - CRM Sales Users
 - CRM Service Users
 - SW Development Kit – Development Version
 - DI-Server (DIS)
 - Additional partner solutions
- Insert the number of users per component
- Submit the request

* **Professional Users include Compability License for AddOns, SAP AddOns, SDK Tools and SW Development Kit – Implementation Version. These components will be added automatically to the license key.**

2. Request for an existing system – First Step

- Click on the icon left of the relevant system
- Change details for this system, e. g.
 - New hardware key
 - New release
 - New database
- Press `Next Step`

2. Request for an existing system – Second Step

- Change the number of users for the existing components
- Add new components to the system and insert the number of users per component
- Submit the request

Upgrade from 6.x to 2004

- Request the according numbers of Professional Users
- Do not change the Business One users, they will be deleted when the license key is assigned

3. Frequently asked questions

- Partner has no S-User. See note 103926.
- S-User has no authorization for his own installations or the customer installations (LIKEY, LIKEY_P). See note 124703.
- No SAP Business One installation has been created. Contact your local contract department.
- Number of licensed users has been exceeded. Check your system landscape in the System Data Maintenance and delete system which are no longer in use. See note 614911.
- You need licensed AddOn Access Users in your contract to request users for partner solutions.

Thank you !

Component SBO-BC-LIKEY

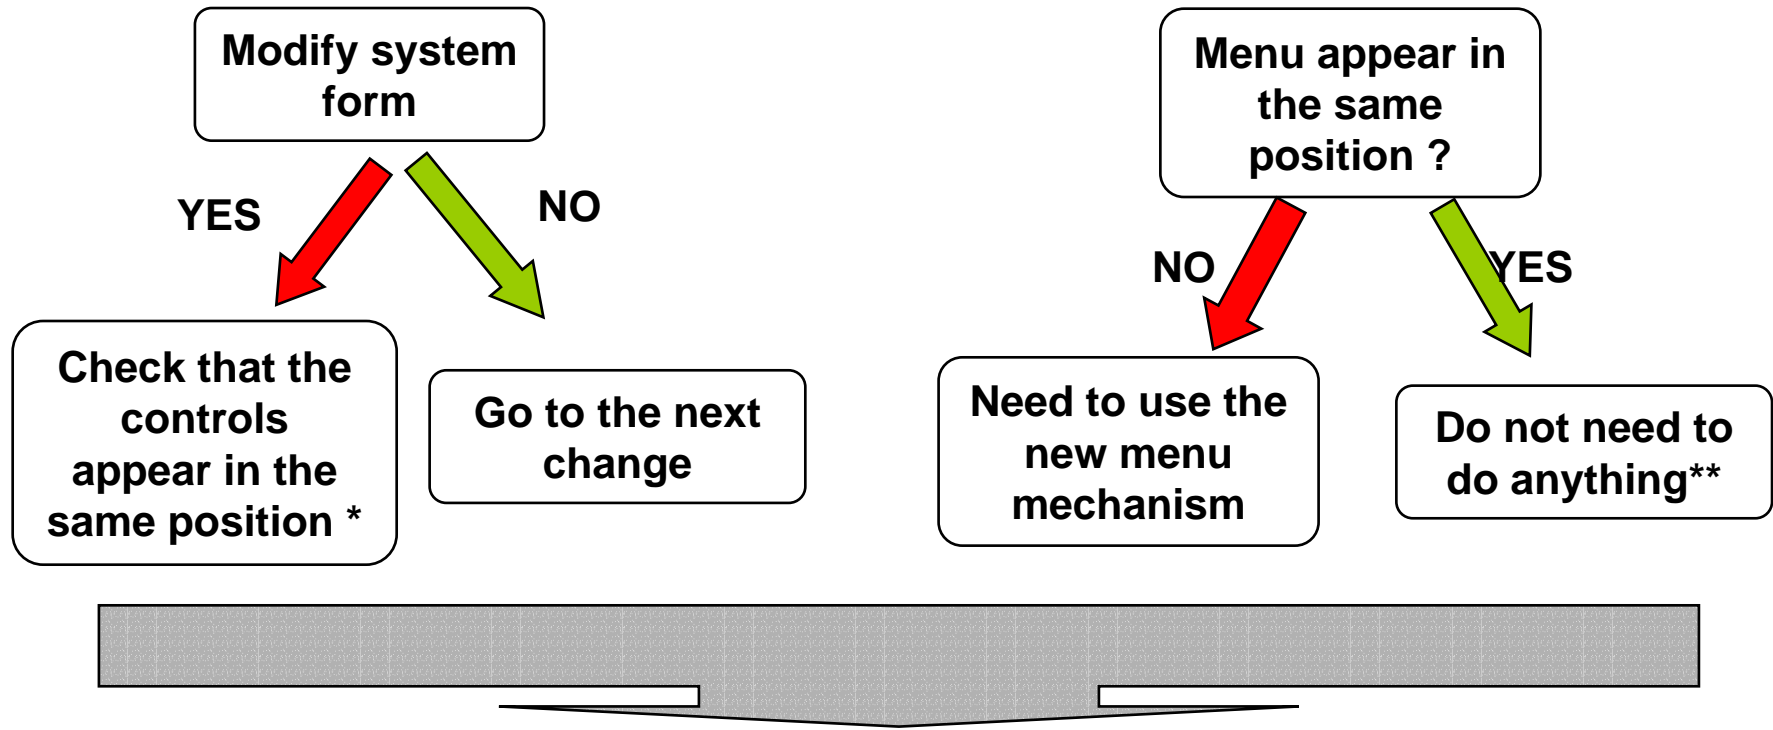

New Add-on registration

- How to build Installer
- How to build ARD file
- Install and uninstall
- How to register add-on

UI API Add-ons - Step After step

UI API Add-ons - Step After step

*** Next version we are going to supply documentation on all the changes in the System form**

**** BUT WE RECOMMEND TO USE THE New Menu mechanism so no menu compatibility problem will happen in the future**

Step after Step

1. Add-on count of the default of the system form

System forms will open in Add mode

2. NOE form ID

In the past it was long and you could not count on the number. Today the format is string but it will be constant

3. Change of the behavior of change company event

In the previous version in a change company event B1 restore the menus automatically. In 2004 the new mechanism of add-on registration in a change company event the menu will be restored automatically but we will not support it any more for all the add-ons that are still registered in the old mechanism (the user will need to handle it by himself)

Document numbering (ONNM) primary key changed.

6.5 primary key = object name + series id

2004 primary key = series id but the series id change in order to be unique

2. Activity object – task object is time less. Can not change the start\end time

3. Remove the serial and batch number properties from the workorder (WKO1)

4. In transaction property value in company DI object changed.

6.5 return false in 2 cases: 1. no active transaction 2. no connection

Today in case 2 it will throw an exception
