5. Appendix	9

1. Business Scenario

The list of US Port Codes is a required master data in SAP Global Trade Services (GTS) Customs Management and can be uploaded from an XML file. During upload, SAP GTS creates these port codes as customs office business partners in the system. In the current release of GTS 7.2, the port code (ex. 2809) in the XML file is used as both the *external business partner number* (if this option is selected) and the office number of the customs office in GTS.

In some cases, existing business partners (ex. 2809 Vendor John Doe) in GTS may overlap with these customs office numbers (ex. 2809 Port of San Francisco). Therefore, the upload of the XML file may generate conflicts during the business partner creation for the customs offices.

This How-To guide provides a workaround to solve the issue while uploading the XML file of customs offices. The goal is to create unique business partners for US customs offices (ex. US2809) and then assign the appropriate port code (2809).

2. Background Information

The list of US customs offices is published in the “Schedule D” from US Customs and Border Protection (CBP). Each US customs office is identified with a unique 4-digit identification number in Schedule D. In this guide, the XML file of US customs office is used to illustrate the procedure of the workaround.

Here are the major steps of the workaround provided in this guide:

1. Modify the US customs office XML file
2. Upload the customs office XML file
3. Use the ABAP program found in the Appendix of this guide as a reference to correct customs office identification number for each customs office in GTS
4. Verify the result in GTS cockpit

This guide is based on the SAP GTS 7.2 release. However, this approach can also be applied to other SAP GTS releases.

The ABAP program in Appendix A is only a sample code for reference. Please modify it accordingly to fit your system environment.

CAUTION

In GTS, if you have business partner external numbers in the format USxxxx where xxxx is the 4-digit official US customs office identification number; you will run into the conflicts that this workaround tries to solve. In this case, you need to modify the step 1 and step 3 accordingly. However, the approach remains the same.

3. Prerequisites

- Software
 - SAP GTS 7.2
 - The Compliance and Customs Management are working in your SAP GTS system.
- Hardware
 - SAP GTS server
- Required/recommended expertise or prior knowledge
 - Basic knowledge of SAP GTS
 - Basic knowledge of ABAP programming
 - Basic knowledge of XML.

4. Step-by-Step Procedure

First of all, you need to get the XML file of US customs office from your data provider. The file from CBP website is not in the XML format at the time this guide is written.

4.1 Prepare the XML file of the US customs office

1. Open the XML file of the US customs offices with an editor, such as notepad.
2. Add two characters "US" in front of the 4-digit identification number for each customs office, as shown in following.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<businesspartners xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <custom_office identifier="PORTLAND, ME" office_no="US0101">
    <address>
      <country name="US">
        <region>ME</region>
        <city>PORTLAND</city>
      </country>
    </address>
    <contact language="EN"/>
  </custom_office>
  <custom_office identifier="BANGOR, ME" office_no="US0102">
    <address>
      <country name="US">
        <region>ME</region>
        <city>BANGOR</city>
      </country>
    </address>
    <contact language="EN"/>
  </custom_office>
</businesspartners>
```

Note

If you already have business partners with external numbers in the format USxxxx where xxxx is the 4-digit official US customs office identification number; you can add other characters instead, such as "ABC". However, you will need to modify the ABAP program in the Appendix of this guide accordingly.

3. Save and close the XML file.

4.2 Upload the XML file into SAP GTS system

1. From the GTS cockpit, follow the navigation path:

SAP GTS Area Menu -> SAP Customs Management -> Master Data -> Customs Offices

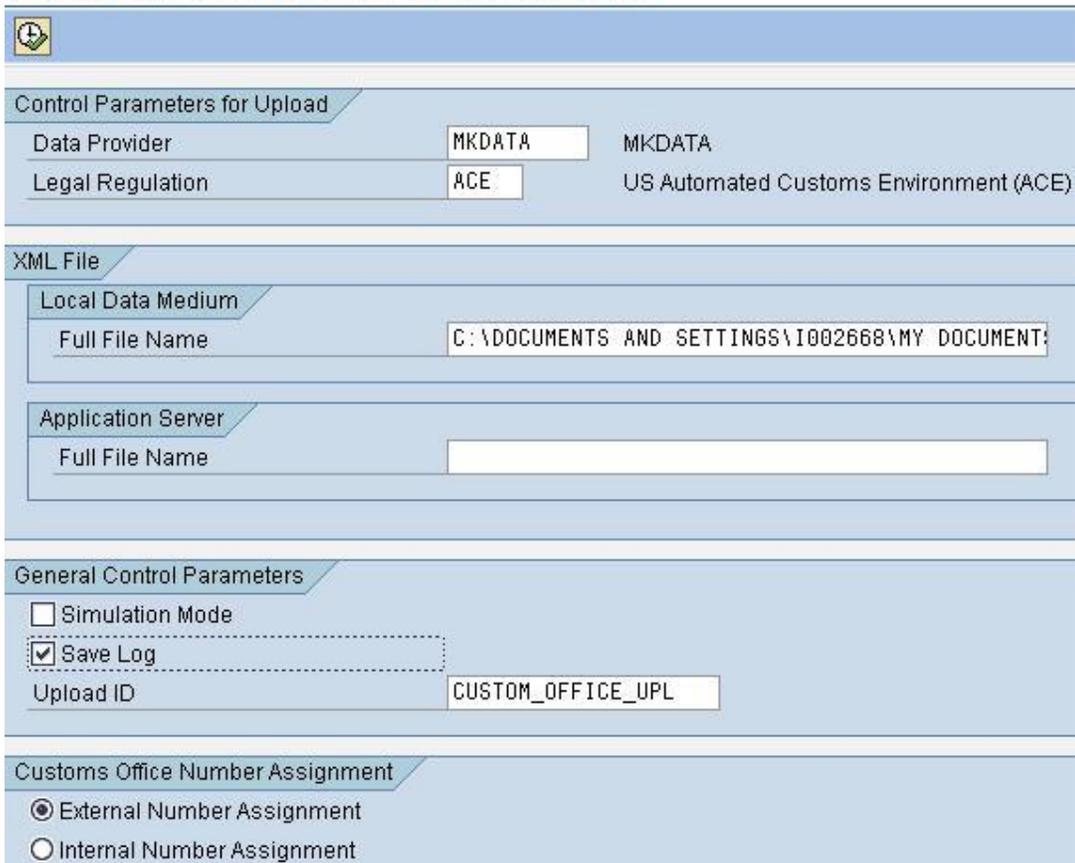

2. Before the upload, check the existing information in GTS system for legal regulation "ACE" by clicking on "Maintain Customs Office Numbers".
3. Load the XML file by clicking on the "Load Customs Offices from XML File" in the Customs Offices section.
4. Provide the information of Data Provider, Legal Regulation, and the full path of the XML file.

 Tip

You might want to try the "Simulation Mode" first to make sure everything is correct before the actual upload.

Load Customs Offices from XML File

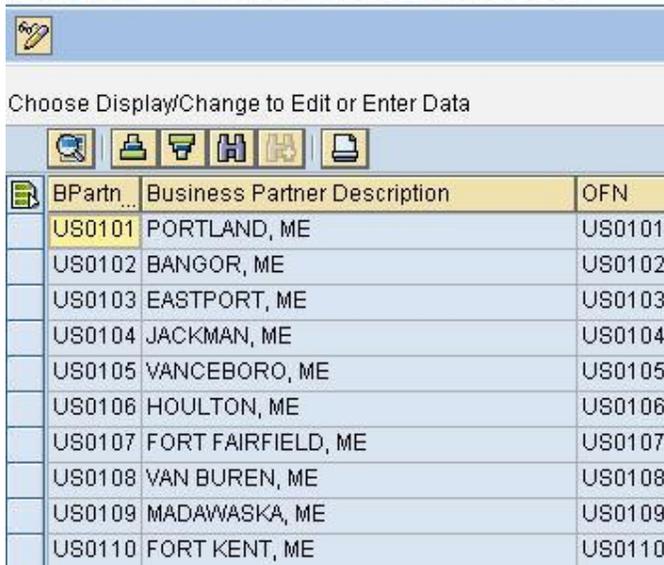

The screenshot shows a SAP configuration screen for loading customs offices from an XML file. It is divided into several sections:

- Control Parameters for Upload:** Contains two rows of fields. The first row has 'Data Provider' with a dropdown menu set to 'MKDATA' and a text field containing 'MKDATA'. The second row has 'Legal Regulation' with a dropdown menu set to 'ACE' and a text field containing 'US Automated Customs Environment (ACE)'.
- XML File:** Contains two sub-sections. The first, 'Local Data Medium', has a 'Full File Name' field with the path 'C:\DOCUMENTS AND SETTINGS\I002668\MY DOCUMENT...'. The second, 'Application Server', has a 'Full File Name' field that is currently empty.
- General Control Parameters:** Contains three rows. The first row has a checkbox for 'Simulation Mode' which is unchecked. The second row has a checkbox for 'Save Log' which is checked. The third row has 'Upload ID' with a text field containing 'CUSTOM_OFFICE_UPL'.
- Customs Office Number Assignment:** Contains two radio buttons. The first, 'External Number Assignment', is selected. The second, 'Internal Number Assignment', is unselected.

5. Click on Execution button and wait to see the message "Tasks performed successfully" in the display log.
6. Click on the Save button to save the data in database.
7. Display the result of the upload by clicking on "Maintain Customs Office Numbers" in the Customs Offices section (or transaction /SAPSL/ BP_MAIN_DNR).
8. Enter the legal regulation, and "US*" in the Business Partners selection field.

Display Customs Office Numbers

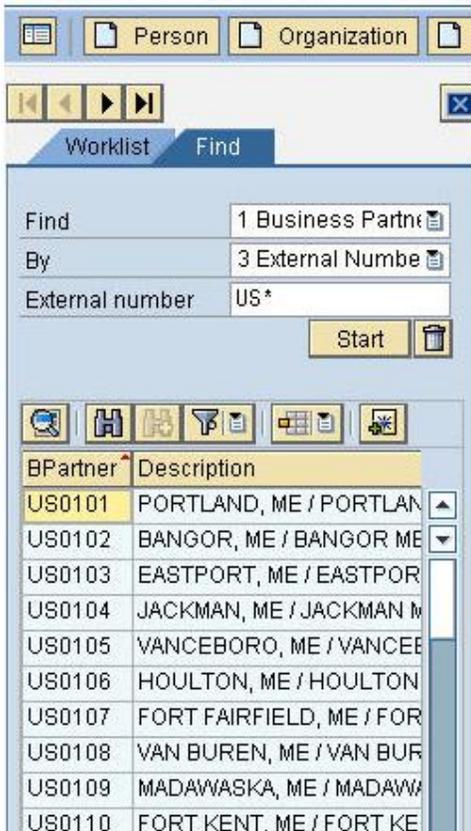

Choose Display/Change to Edit or Enter Data

BPartn...	Business Partner Description	OFN
US0101	PORTLAND, ME	US0101
US0102	BANGOR, ME	US0102
US0103	EASTPORT, ME	US0103
US0104	JACKMAN, ME	US0104
US0105	VANCEBORO, ME	US0105
US0106	HOULTON, ME	US0106
US0107	FORT FAIRFIELD, ME	US0107
US0108	VAN BUREN, ME	US0108
US0109	MADAWASKA, ME	US0109
US0110	FORT KENT, ME	US0110

Notice the customs office identification number in the column "OFN" has the values in the format USxxxx, where the xxxx is the customs office identification number. We need to remove the prefix 'US' created during the XML file upload to make it a 4-digit number as published by the CBP.

9. Check the business partner creation of the customs offices after the upload with transaction BP.

4.3 Run the modification program to update the customs office identification number in GTS

1. Create the modification program with the sample code in Appendix A as reference, by SE38. Modify it accordingly to fit your system environment.
2. Activate and execute the program.
3. Verify the result by clicking on "Maintain Customs Office Numbers" in the Customs Offices section (or transaction /SAPSL/ BP_MAIN_DNR). The column OFN should be only assigned with the 4-digit official US customs office number.
