Web Dynpro for ABAP: Tutorial 4 – Display Bookings of Selected Flight

Development Objectives

In this tutorial, the BAPINAV component from Web Dynpro for ABAP - BAPI Navigation tutorial will be further enhanced to display a list of bookings for a selected flight. The context which contains the flights information will be enhanced with a sub node for the corresponding bookings. We will also show how the booking information is retrieved in a so called supply function and the context node bound to a new table UI element in the Main View.

Procedure

- Copy the Web Dynpro component from Tutorial 3 or copy the component `ZZ_00_BAPINAV` to a new component with name `ZZ_00_BOOKINGS`. Adjust the name of the window according to the component name.
- Enhance the `FLIGHT_LIST` node in the component controller context with a sub node `BOOKINGS` for the bookings, based on the dictionary structure `SBOOK` with cardinality `0..n` and supply function `GET_BOOKINGS`.
- Select the following attribute from the structure `SBOOK`: `CARRID`, `CONNID`, `FLDATE`, `BOOKID`, `CUSTOMID`, `CUSTTYPE`, `CLASS`, `ORDER_DATE`, `PASSNAME`.
- Implement supply method `GET_BOOKINGS` which fills the node `BOOKINGS` with booking information, according to the selected flight. Use the static `GET_BOOKINGS` method of the class `CL_WDABAP_FLIGHT_MODEL`.
- Update the mapping of the `FLIGHT_LIST` node between the component controller context and the view context of `FLIGHTLISTVIEW`.
- Add a new table UI element to the layout of the view `FLIGHTLISTVIEW` and bind it to the node `BOOKINGS` of the view context.
- Activation, Creation of a Web Dynpro Application and Execution. Select different flights.

Create the Web Dynpro component ZZ_00_BOOKINGS

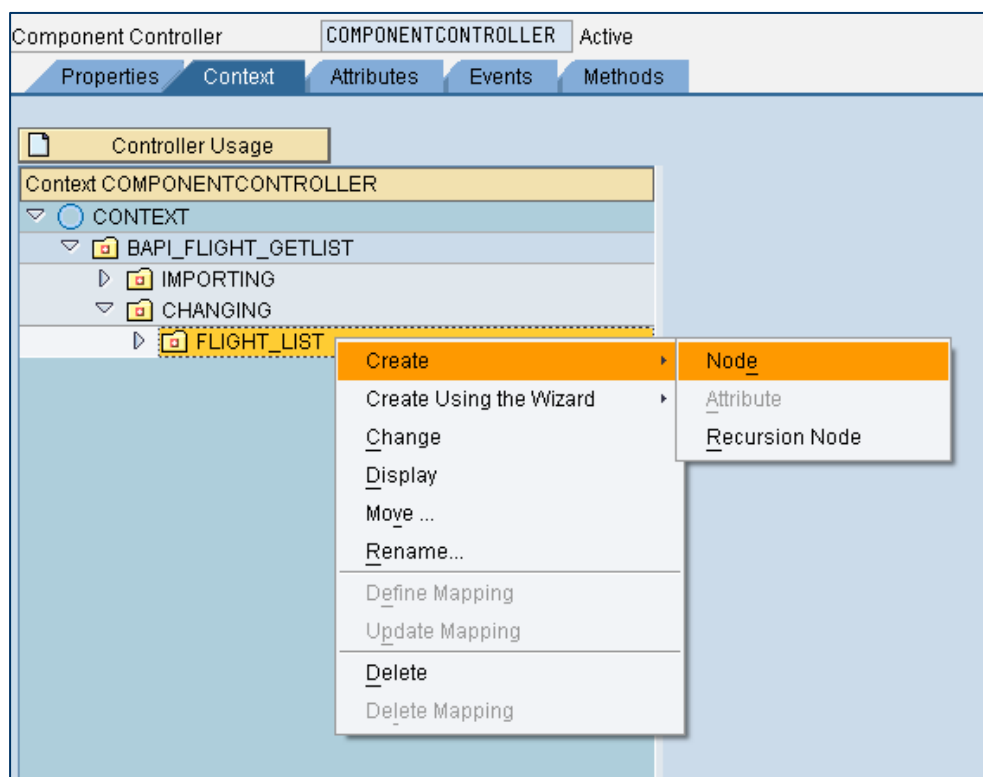

Procedure

1. Copy the Web Dynpro component from Tutorial 3 or copy the component ZZ_00_BAPINAV to a new component with name ZZ_00_BOOKINGS.

Create sub node BOOKINGS and the corresponding Supply Function GET_BOOKINGS

Procedure

1. Here you will create a new sub node BOOKINGS. Go to the context view of the COMPONENTCONTROLLER and add a new sub node **within** the FLIGHT_LIST node.

It is important that the new node is a sub node of the FLIGHT_LIST node and not a node at the same level.

2. Name the new node *BOOKINGS* and select *0..n* for the cardinality of the new node. Choose *SBOOK* as dictionary structure and enter *get_bookings* as name for the supply function and press *Add Attribute from Structure*.

The screenshot shows a dialog box titled "Create Nodes" with the following fields and values:

Node Name	BOOKINGS
Interface Node	No
Input Element (Ext.)	No
Dictionary structure	SBOOK
Cardinality	0..n
Selection	0..1
Init. Lead Selection	Yes
Singleton	Yes
Supply Function	get_bookings

At the bottom of the dialog, there are three buttons: a green checkmark icon, a yellow button labeled "Add Attribute from Structure", and a red X icon.

- Select CARRID, CONNID, FLDATE, BOOKID, CUSTOMID, CUSTTYPE, CLASS, ORDER_DATE, PASSNAME, and confirm.

Component	Key	RT	Component Type	Data Type	Length	Deci	Sh
MANDT	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S MANDT	CLNT	3	0	Cli
CARRID	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S CARR_ID	CHAR	3	0	Air
CONNID	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S CONN_ID	NUMC	4	0	Fli
FLDATE	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S DATE	DATS	8	0	Fli
BOOKID	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S BOOK_ID	NUMC	8	0	Bo
CUSTOMID	<input type="checkbox"/>	<input type="checkbox"/>	S CUSTOMER	NUMC	8	0	Cu
CUSTTYPE	<input type="checkbox"/>	<input type="checkbox"/>	S CUSTTYPE	CHAR	1	0	Cu
SMOKER	<input type="checkbox"/>	<input type="checkbox"/>	S SMOKER	CHAR	1	0	Sn
LUGGWEIGHT	<input type="checkbox"/>	<input type="checkbox"/>	S LUGWEIGH	QUAN	8	4	We
WUNIT	<input type="checkbox"/>	<input type="checkbox"/>	S WEIUNIT	UNIT	3	0	We
INVOICE	<input type="checkbox"/>	<input type="checkbox"/>	S INVFLAG	CHAR	1	0	Inv
CLASS	<input type="checkbox"/>	<input type="checkbox"/>	S CLASS	CHAR	1	0	Fli
FORCURAM	<input type="checkbox"/>	<input type="checkbox"/>	S F CUR PR	CURR	15	2	Bo
FORCURKEY	<input type="checkbox"/>	<input type="checkbox"/>	S CURR	CUKY	5	0	Pa
LOCCURAM	<input type="checkbox"/>	<input type="checkbox"/>	S L CUR PR	CURR	15	2	Pri
LOCCURKEY	<input type="checkbox"/>	<input type="checkbox"/>	S CURRCODE	CUKY	5	0	Lo
ORDER_DATE	<input type="checkbox"/>	<input type="checkbox"/>	S BDATE	DATS	8	0	Bo
COUNTER	<input type="checkbox"/>	<input type="checkbox"/>	S COUNTNUM	NUMC	8	0	Nu
AGENCYNUM	<input type="checkbox"/>	<input type="checkbox"/>	S AGNCYNUM	NUMC	8	0	Tr
CANCELLED	<input type="checkbox"/>	<input type="checkbox"/>	S CANCEL	CHAR	1	0	Ca
RESERVED	<input type="checkbox"/>	<input type="checkbox"/>	S RESERV	CHAR	1	0	Re
PASSNAME	<input type="checkbox"/>	<input type="checkbox"/>	S PASSNAME	CHAR	25	0	Na
PASSFORM	<input type="checkbox"/>	<input type="checkbox"/>	S FORM	CHAR	15	0	Fo
PASSBIRTH	<input type="checkbox"/>	<input type="checkbox"/>	S BIRTHDAT	DATS	8	0	De

- The new node BOOKINGS should now be a sub node of the node FLIGHT_LIST with the selected attributes:

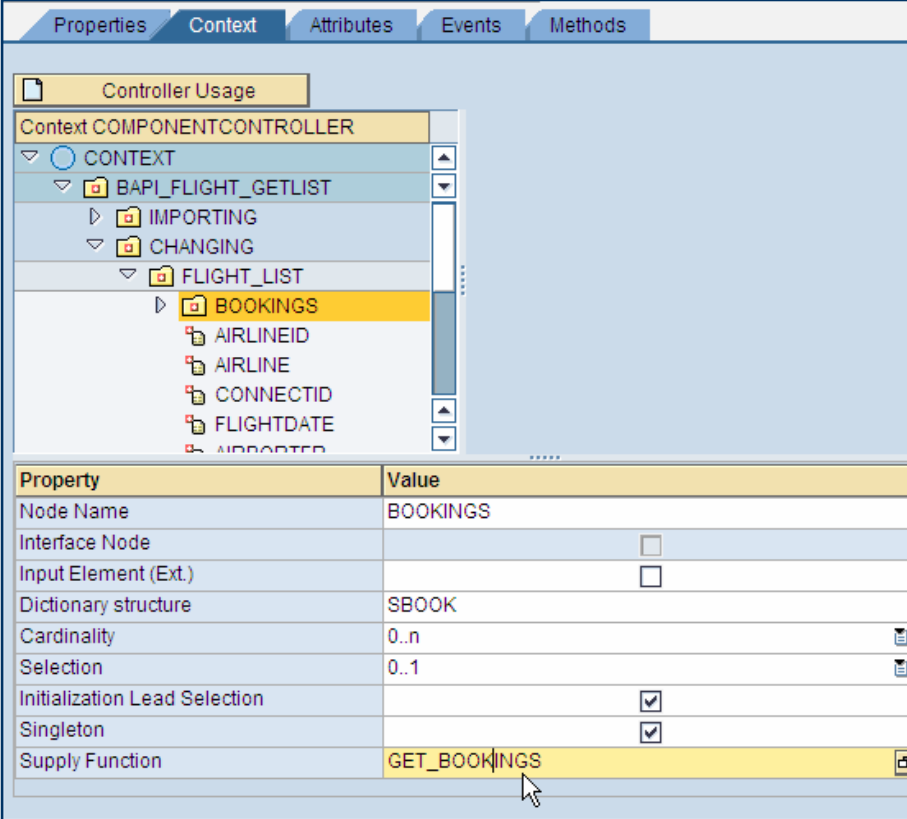

```

Context COMPONENTCONTROLLER
├── CONTEXT
│   ├── BAPI_FLIGHT_GETLIST
│   │   ├── IMPORTING
│   │   └── CHANGING
│   └── FLIGHT_LIST
│       └── BOOKINGS
│           ├── CARRID
│           ├── CONNID
│           ├── FLDATE
│           ├── BOOKID
│           ├── CUSTOMID
│           ├── CUSTTYPE
│           ├── CLASS
│           ├── ORDER_DATE
│           └── PASSNAME
└── AIRLINEID
    ├── AIRLINE
    ├── CONNECTID
    ├── FLIGHTDATE
    └── AIRPORTER
  
```

Implement the Supply method GET_BOOKINGS

Procedure

1. Double click at the supply function *GET_BOOKINGS* at the properties panel of the newly created BOOKINGS node.

The screenshot shows the SAP Web Dynpro IDE interface. The 'Methods' tab is selected, displaying a tree view of the 'Context COMPONENTCONTROLLER' structure. The 'BOOKINGS' node is highlighted. Below the tree view, a table lists the properties of the selected node:

Property	Value
Node Name	BOOKINGS
Interface Node	<input type="checkbox"/>
Input Element (Ext.)	<input type="checkbox"/>
Dictionary structure	SBOOK
Cardinality	0..n
Selection	0..1
Initialization Lead Selection	<input checked="" type="checkbox"/>
Singleton	<input checked="" type="checkbox"/>
Supply Function	GET_BOOKINGS

This will lead you to the implementation of the GET_BOOKINGS method. Here the node BOOKINGS will be filled with bookings data dependent of the current parent node's lead selection (the specific flight selected in the visible table at the screen).

Enhance the empty method GET_BOOKINGS (you may delete the comment lines) with coding that fills the current node. First the current data of the parent node can be retrieved via the parent_element object.

- For retrieving the bookings data use the static method of the CL_WDABAP_FLIGHT_MODEL class.:

```

method GET_BOOKINGS .
  data:
    Itab_Bookings   type IF_COMPONENTCONTROLLER=>Elements_Bookings ,
    Stru_Bookings   like line of Itab_Bookings ,
    Stru_FlightList type if_componentcontroller=>Element_FLIGHT_LIST.

  parent_element->get_static_attributes(
    importing static_attributes = Stru_FlightList ).

  Itab_bookings = CL_WDABAP_FLIGHT_MODEL=>GET_BOOKINGS(
    CARRID = Stru_FlightList-airlineid
    CONNID = Stru_FlightList-connectid
    FLDATE = Stru_FlightList-flightdate
  ).
  node->bind_table( Itab_bookings ).
endmethod.

```

Update the Mapping between View Context and Component Controller Context

Procedure

Because the node FLIGHT_LIST of the component controller has changed you have to update the mapping to the mapped FLIGHT_LIST node of the view controller of FLIGHTLISTVIEW.

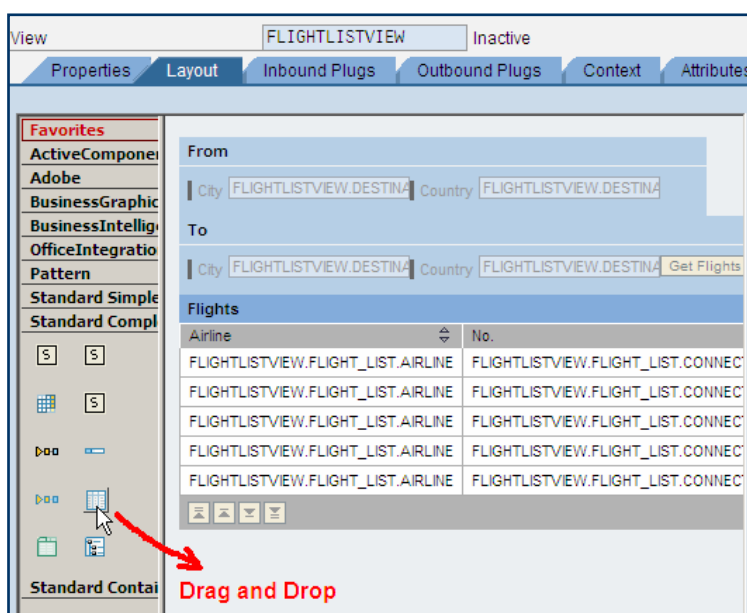

- Go to the tab *Context* of the view FLIGHTLISTVIEW and select *Update Mapping* for the node FLIGHT_LIST by right click (context menu):
- Confirm the following dialog and check, that the BOOKINGS node is now also available as sub node of the node FLIGHT_LIST.

Add a new table UI element in View Layout and Bind it

Procedure

1. Go to the tab *Layout* of the FLIGHTLISTVIEW and add a second table UI element from the **Standard Complex** UI elements section to the view.

- To bind the new table UI element to the new BOOKINGS sub node right click on the TABLE_2 node in the hierarchical view at the left hand side (1) and choose *Context...* at the appearing dialog box (2) to select the BOOKINGS node (3).

In the appearing dialog box the visible columns of the table can be chosen. You may leave the default selection of all columns and confirm.

Getting Error:

If you are not using the NW 2004s ABAP sneak preview edition, you might get the following error on NW2004s Systems.

The type CL_WDABAP_FLIGHT_MODEL=>get_bookings is unknown or not found.

Class WDABAP_FLIGHT_MODEL is only provided in our NW 2004s ABAP sneak preview systems.

Please do the following if you encounter the error above.

- Simply create a ZCL_WDABAP_FLIGHT_MODEL class in your *get_bookings* method.

Its purpose is only to select from the SBOOK table.

```
select * from sbook into table bookings where
```

```
carrid = carrid
```

```
connid= connid
```

```
fldate = fldate.
```

->>*bookings* is the return parameter of type *TY_BOOKINGS*

Activation, Creation of a Web Dynpro Application and Execution

1. Activate **all objects** of Web Dynpro component `ZZ_00_BOOKINGS`.
2. Create the Web Dynpro application `ZZ_00_BOOKINGS` and assign it to package `$TMP` (local object).
3. Run your application.

The result should look like this:

Result

As a result of this tutorial you were able to understand the supply function concepts and learned to how to display data in nested tables within a Web Dynpro application.

SAP Online Help

More information on Web Dynpro for ABAP can be found at the SAP Help Portal under the short link http://help.sap.com/saphelp_nw04s/helpdata/en/77/3545415ea6f523e1000000a155106/frame.htm or via path help.sap.com → Documentation → SAP NetWeaver → SAP NetWeaver 2004s → English → SAP NetWeaver Library → SAP NetWeaver by Key Capability → Application Platform by Key Capability → ABAP Technology → UI Technology → Web UI Technology → Web Dynpro for ABAP.
