## Document History

Document Version	Description
1.00	Official release of this guide

## Typographic Conventions

Type Style	Description
<i>Example Text</i>	Words or characters quoted from the screen. These include field names, screen titles, pushbuttons labels, menu names, menu paths, and menu options.
	Cross-references to other documentation
<b>Example text</b>	Emphasized words or phrases in body text, graphic titles, and table titles
Example text	File and directory names and their paths, messages, names of variables and parameters, source text, and names of installation, upgrade and database tools.
<b>Example text</b>	User entry texts. These are words or characters that you enter in the system exactly as they appear in the documentation.
<b>&lt;Example text&gt;</b>	Variable user entry. Angle brackets indicate that you replace these words and characters with appropriate entries to make entries in the system.
EXAMPLE TEXT	Keys on the keyboard, for example, F2 or ENTER.

## 1. Business Scenario

You are using BEx Web Applications for planning. As the data to be entered is frequently taken from other sources like MS Excel you like to paste values into cells of the input ready query. This How to Guide describes a JavaScript implementation to add this functionality to BEx WebApplications.

## 2. Background Information

The implementation allows selecting a cell range by a single left mouse click for the left upper and shift left click for the bottom right corner. This is the same pattern as known from Microsoft Excel.

The selected cells are highlighted as shown in the screenshot.

Revaluate		
10	Revaluate	Copy
		Paste
		Clear Selected Cells
		Amount ▲
	Account number ▲	
5100	Direct Labor Costs	
2000	Accounts Payable	
1520	Vehicles	
1100	Accounts Receivable	123,00
Overall Result		123,00

Press *Copy* to transfer the content of the highlighted cells to the Microsoft Windows clipboard. Use the standard paste functionality like **CTRL+V** to move it to your target application (e.g. Microsoft Excel).

The *Paste* button requires text located in the Microsoft Windows clipboard. Insertion point in the analysis item is a single highlighted cell. Cells not ready for input are skipped. Please note that the *Paste* button works in the context of an analysis item only.

The *Clear* button is an example for a simple function deleting the content of highlighted cells. You could take this a sample implementation to create your own functions that use or modify cell content like revaluations, calculating totals and averages, etc.

```
function sapbi_rig_cp_clear(){
    var info = sapbi_rig_cp_inf;
    if (sapbi_rig_cp_isValidState(info) === false){
        alert("Selection not defined properly.");
        return;
    }
    var cell;
    for(var cntSel = 0; cntSel<info.activeSel.length; cntSel++){
        cell = document.getElementById(info.activeSel[cntSel][0]);
        sapbi_rig_cp_setContent(cell, " ");
    }
}
```

### 3. Prerequisites

The JavaScript requires the permission to access the windows clipboard object. If the access right is not given the JavaScript described in this HowTo prompts you that copy or paste can't be performed. In such a case please contact your system administrator.

Details about clipboard access from JavaScript and informations about granting access rights can be found here:

IE 7.0 and Clipboard [http://msdn.microsoft.com/en-us/library/bb250473\(VS.85\).aspx](http://msdn.microsoft.com/en-us/library/bb250473(VS.85).aspx)

IE 6.0 and Clipboard <http://support.microsoft.com/kb/224993>

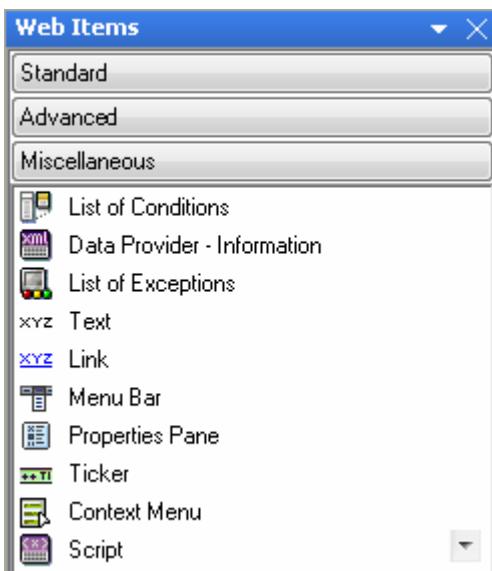

FireFox [http://kb.mozillazine.org/Granting\\_JavaScript\\_access\\_to\\_the\\_clipboard](http://kb.mozillazine.org/Granting_JavaScript_access_to_the_clipboard)

## 4. Step-by-Step Procedure

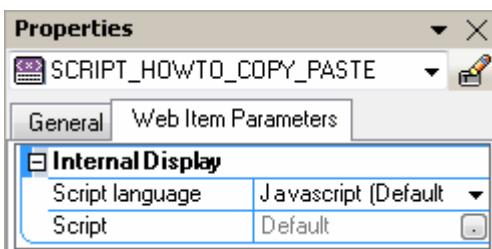

There are two things to do: First insert the JavaScript given in the appendix / extra file into a script item of the WAD. Secondly insert buttons for copy, paste and clear into the BEx Web Application.

### 4.1 Inserting the Java Script

1. Open your BEx Web Application you like to enhance.
2. Insert a java script item located in the miscellaneous group of Web Items

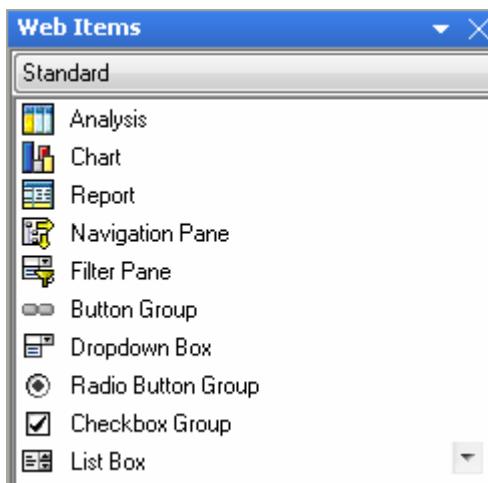

3. Change the default name to SCRIPT\_HOWTO\_COPY\_PASTE

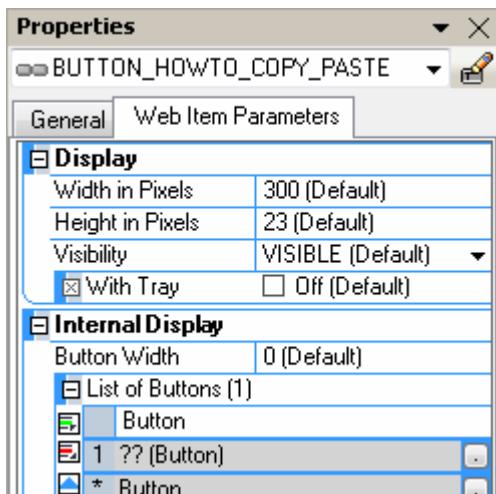

4. Choose the value help button in the property section – line Script. As a result an editor will
5. Pop-up.
6. Paste the JavaScript source code into the pop-up.
7. Save the current setup

## 4.2 Insert Buttons to Trigger new Actions

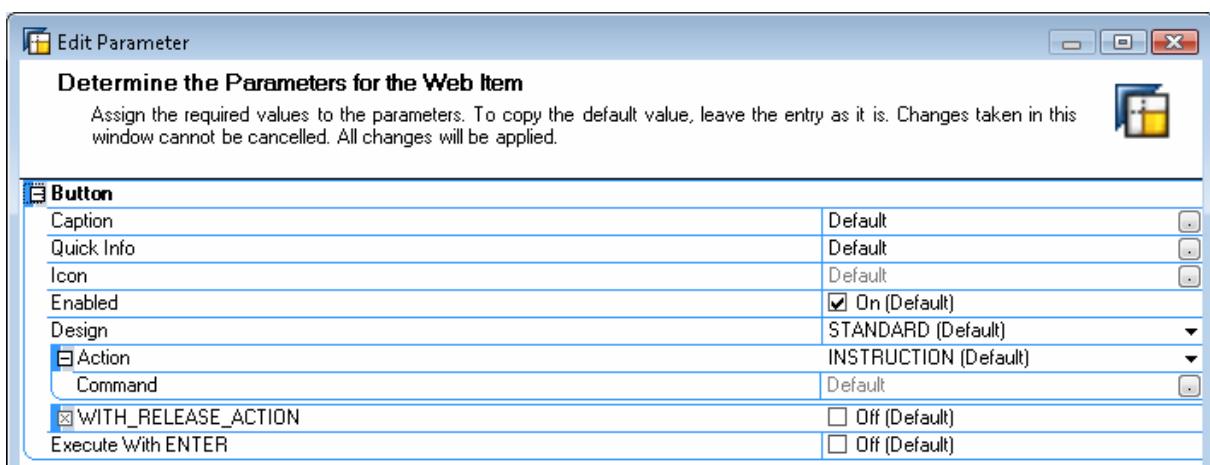

1. Insert a button Group Item from the standard group

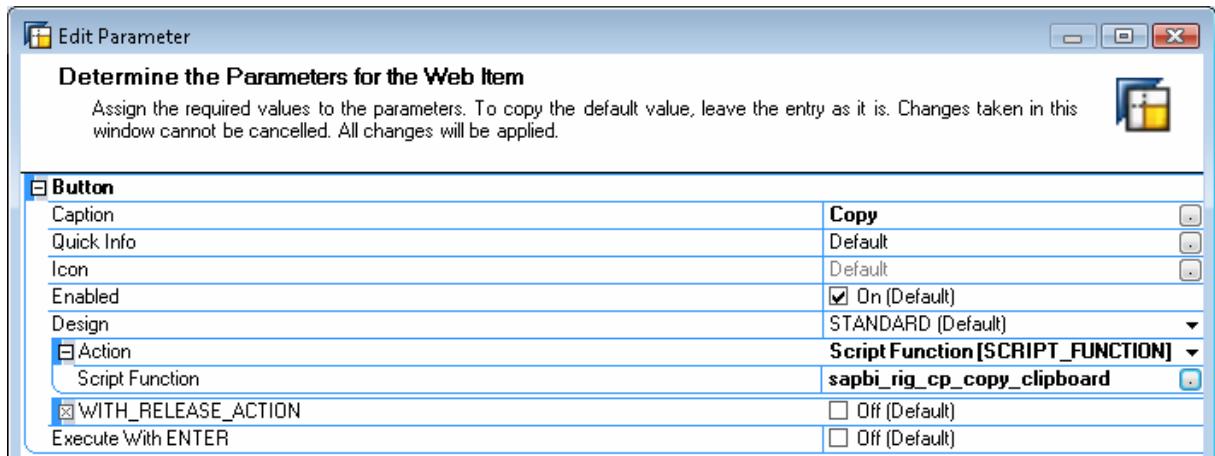

2. Rename the item to BUTTON\_HOWTO\_COPY\_PASTE

3. Now we insert the copy button. Trigger the dialog via the value help in line 1 of the button section. A dialog comes up like this:

4. Change the properties for caption, action and script function as shown in bold here:

Caption: Copy

Action: Script Function

Script Function: sapbi\_rig\_cp\_copy\_clipboard

5. Repeat the step for the paste function using the following values:

Caption: Paste

Action: Script Function

Script Function: sapbi\_rig\_cp\_paste\_clipboard

6. Repeat the step for the delete function using the following values:

Caption: Delete

Action: Script Function

Script Function: sapbi\_rig\_cp\_clear

7. Save the results.

## 5. Appendix

### Appendix A – Source Code

```

// -----
// Copy and Paste for SAP BI Analysis Item
// last change by: Olaf Fischer, SAP AG - 24.7.2008
// -----
// Functionality: selecting a rectangle in Analysis Item
//   - mouse click and shift click to define
//   - paste: select single cell and paste
//   - paste: select multi cell and paste will fill all with identical content
//   - paste: select multi and paste multi - message!
//   - paste ignores table fields which are not input enabled (no tagName 'INPUT')
// -----

// List of global dependencies:
/*jslint browser: true */
/*global
