About these notes

1

chapter

This document provides most recent product information about Crystal Server Reports 2008. It discusses issues related to installing and uninstalling Crystal Reports Server 2008, and upgrading from earlier versions of the product. It also describes workarounds for these issues.

Read the entire document before installing the Business Objects software. For information on Crystal Reports Server 2008 that may become available following the release of this document, visit the Business Objects support site at the link http://support.businessobjects.com/documentation/product_guides/default.asp.

Known issues in Crystal
Reports Server 2008

2

chapter

The following sections discuss the known issues and limitations in Crystal Reports Server 2008.

Installation of Crystal Reports Server 2008

Issue:

During new installation of Crystal Reports Server 2008, or while upgrading from Crystal Reports Server XI / XI R2, the Installer does not provide the option to configure the IIS (.NET) version of InfoView and CMC Web Application.

Crystal Reports Server 2008 does not support the IIS (.NET) version of InfoView and CMC Web Application; it supports only Java Application Servers such as Tomcat. For the detailed list of supported Java Application Servers, see the `platforms.txt` document for Crystal Reports Server 2008.

Upgrading to Crystal Reports Server 2008

Upgrading to Crystal Reports Server 2008 from any of the following products is not supported:

- BusinessObjects Enterprise XI
- BusinessObjects Enterprise XI R2
- BusinessObjects Edge Series XI R2

If you try to upgrade Crystal Reports Server 2008 from any of these products, the installation might fail, or might not function as expected.

Uninstallation of Crystal Reports 2008

Issue:

If Crystal Reports Server 2008 co-exists with Crystal Reports 2008 with same set of language packs on a machine, then the uninstallation of Crystal Reports 2008 results in the deletion of non-English resource files of Crystal Reports Server 2008.

Workaround:

Use the **Add or Remove Programs** option to repair each language pack, so that you can retrieve the non-English resource files of Crystal Reports Server 2008.

Miscellaneous issues

Though the Federation link is visible in CMC, the Federation feature is not supported in Crystal Reports Server 2008.

appendix

Online documentation library

Business Objects offers a full documentation set covering all products and their deployment. The online documentation library has the most up-to-date version of the Business Objects product documentation. You can browse the library contents, do full-text searches, read guides on line, and download PDF versions. The library is updated regularly with new content as it becomes available.

Looking for the best deployment solution for your company?

Business Objects consultants can accompany you from the initial analysis stage to the delivery of your deployment project. Expertise is available in relational and multidimensional databases, in connectivities, database design tools, customized embedding technology, and more.

For more information, contact your local sales office, or contact us at:

<http://www.businessobjects.com/services/consulting/>

Looking for training options?

From traditional classroom learning to targeted e-learning seminars, we can offer a training package to suit your learning needs and preferred learning style. Find more information on the Business Objects Education web site:

<http://www.businessobjects.com/services/training>

Send us your feedback

Do you have a suggestion on how we can improve our documentation? Is there something you particularly like or have found useful? Drop us a line, and we will do our best to ensure that your suggestion is included in the next release of our documentation:

<mailto:documentation@businessobjects.com>

Note: If your issue concerns a Business Objects product and not the documentation, please contact our Customer Support experts. For information about Customer Support visit: <http://www.businessobjects.com/support/>.
