Guidelines about Secure Programming in ABAP and Java Available

The SAP NetWeaver Developer's Guide now contains comprehensive documentation about how to develop secure ABAP and Java applications based on the SAP NetWeaver platform. The guidelines address topics such as cross-site scripting (XSS), SQL injection, input validation, URL encoding, logging, virus scanning, and more. For each topic the security vulnerability is described and recommendations are given about appropriate security measures to take. Standard solutions that exist from the SAP NetWeaver platform are presented, including functions and interfaces that need to be used. In addition, example code is provided where appropriate.

The guidelines for ABAP and Java can be found at <https://www.sdn.sap.com/irj/sdn/devguide2004s>
Under Fundamentals -> Making Applications Enterprise Ready -> Secure Programming

Follow-Up on SAP's Acquisition of Virsa

SAP has announced the creation of a new business unit to empower customers with end-to-end solutions for governance, risk management and compliance (GRC), offering a holistic alternative to the fragmented GRC point solutions available in the market. Events

SAP WIS Admin Conference, June 12 - 14 in Las Vegas: This year's conference focuses on performance and security. SAP security expert Gerlinde Zibulski will hold several lectures on Single Sign-On variants, user management options and the Security Optimization Service. In the evenings, you will also have the opportunity to meet her personally at the "Meet the Expert" table. More information at <http://www.sapadmin2006.com/index.cfm?usergroup=regular&src=1>

Keep yourself informed about news on the upcoming **SAP TECHED** events at <https://www.sdn.sap.com/irj/sdn/sapteched>. This year's SAP TECHED will take place in

Las Vegas, Nevada: 12 - 15 September

Amsterdam, Holland: 18 - 20 October

Bangalore, India: 8 - 10 November
