Data Integrator Connectivity Notes

Data Integrator Database Connectivity Support policy

BusinessObjects Data Integrator RDBMS support is defined by the version of the database client interface. Any database client interface supported by Data Integrator will be supported in any client-server combination which is supported by the database vendor. If a vendor announces that they will discontinue support, Data Integrator must discontinue on-going support for that database.

Data Integrator supports all client interfaces listed in this document and client interfaces that are compatible with versions listed.

Unless explicitly stated otherwise, all database versions refer to the generally available versions provided by the vendor for an "x.x" release.

Data Integrator Database Connectivity Limitation

Due to the driver limitation of supporting multiple connections, the following RDBMS are not supported with Data Integrator through DataDirect Technologies ODBC Connect Driver on UNIX: DB2, AS/400, and Btrieve.

Data Integrator Technology Connectivity

Data Integrator supports XML Schema version 1.0 as defined by W3c.org.

Data Integrator supports SNMP version 3 except encryption.

Data Integrator with JD Edwards Applications

If the Data Integrator server is on Linux, JDE One World is only supported with source database MSSQL, Oracle, and mainframe.

If the Data Integrator server is on Linux, and JDE World is using DB2/AS400, connection must be made through iSeries Access.

Data Integrator with Oracle Applications

All Oracle database versions supported by Oracle Applications 11i can be used as source for Rapid Marts for Oracle Applications.

Data Integrator with PeopleTools

PeopleSoft 8 support is implemented for Oracle only. The version of the Oracle client connecting to the underlying PeopleSoft database must be supported by Data Integrator.

Data Integrator with Siebel

Siebel support is implemented for SQL Server, DB2, and Oracle only. The version of the database client connecting to the underlying Siebel database must be supported by Data Integrator.

Data Integrator with Teradata

The versions of TTU client supported include:

Teradata server version	Client version
V2R6.1	TTU 8.1
