

BRGUI 6.40 is a **platform-independent graphical front end for BR*Tools**.

It is based on Java® technology so that you can run it on the database server or any other client such as your office PC. If you run it on a separate client, it remotely connects to BR*Tools running on your database server. It is available in both English and German.

Installation

Requirements:

BRGUI 6.40 requires JDK 1.4.

BRGUI 6.40 runs on UNIX and Windows platforms.

For more information see **SAP Note [611493](#)**.

Procedure:

1. Download the BRGUI zip file from <https://www.sdn.sap.com/irj/sdn/ora>.
2. Unzip the BRGUI files to a directory of your choice.
3. Adapt the BRGUI configuration file to your environment, as described in the readme file.
4. Run `brgui.bat` (Windows) or `brgui` (UNIX).
BRGUI starts and connects to the database server of your choice.
