17-19 October

Location: Munich, Germany

Venue: tbd

Turkey, April 16 - 20, 2007 First International Workshop on Security Technologies for Next Generation Collaborative Business Applications (SECOBAP'07) Over the past decade, research on business process technologies has focused on the development of collaborative solutions capable of capturing the increasingly dynamic nature of both intra and inter-enterprise workflows. These solutions, which are now starting to be deployed by industry, revolve around service-oriented architectures and event-driven programming paradigms. Globally, they define a new space of "Next Generation Business Applications" which, because of their intrinsic openness and flexibility, also call for new security solutions. Find more information at http://www.cs.cmu.edu/~jinghai/SECOBAP/

Security Link Library

In this link library you will find links to all places within SAP where the topic **Security** is addressed or discussed.

Security on SDN

SDN is an active online community where ABAP, Java, .NET, and other cutting-edge technologies converge to form a resource and collaboration channel for SAP developers, consultants, integrators, and business analysts. SDN hosts a technical library, expert blogs, exclusive downloads and code samples, an extensive eLearning catalog, and active, moderated discussion forums.
