

# TEP12: Exercise

## Exercise 06-02: Restarting PRT Services

At the conclusion of this exercise, you will be able to:

- Restart Portal Runtime Services.
- Understand better how the Portal Runtime engine works.

- 1-1 Open a browser window and login to the portal as administrator with logon “portalsetup” and password “trainer”.  
Navigate to verify that the portal is fully operational.
- 1-2 Please login to your portal and navigate to „System Administration“, „Support“, „Portal Runtime“, „Application Console“.  
Then open the application „com.sap.portal.yahoo“ to see the components and services.  
Click on “Restart” to restart the service.
- 1-3 Try an alternative way to restart a portal service:  
Please navigate to „System Administration“, „System Configuration“, „Service Configuration“ and open the application „com.sap.portal.yahoo“ below of „Applications“.  
Then restart the application with a right-click on the application name and restart the service with a right-click on the service „yahoo“.
