Metadata Manager Connectivity Notes

Metadata Manager Database Connectivity Support policy

BusinessObjects Metadata Manager RDBMS support is defined by the version of the database client interface. Any database client interface supported by Metadata Manager will be supported in any client-server combination which is supported by the database vendor. If a vendor announces that they will discontinue support, Metadata Manager must discontinue on-going support for that database.

Metadata Manager supports all client interfaces listed in this document and client interfaces that are compatible with versions listed.

Unless explicitly stated otherwise, all database versions refer to the generally available versions provided by the vendor for an "x.x" release.
