

IMPORTING A SPREADSHEET INTO XCELSIUS

将 Excel 表格导入 Xcelsius

In this video I am gonna to show you how to import an Excel model into Xcelsius 2008 and also at same time, how to export your existing model in your design model outside of the Xcelsius.

在这个视频中，我将要给你们示范如何将 Excel 模型导入到 Xcelsius 2008 中，同时，也将演示如何将把你设计好的已经存在的模型导出 Xcelsius。

As you can see, Xcelsius interface has canvas and integrated excel on the bottom. So, in this case, if you have already designed an excel model outside, Xcelsius file you can import, use Import Wizard.

你可以看到，Xcelsius 有默认的帆布操作界面，而且还把 Excel 整合进来，放在了下面。所以这样的话，如果你已经有了一个设计好的 Excel 模型，你可以导入 Xcelsius 文件，使用导入助手。

For now, I don't have models, so let's go and open templates, first I'll show you how to export it, and then I'll show you how import it. So let's us go and open templates, you get all these templates when you install Xcelsius for the first time and you can always use it as training tool as reference, when you wanna see the logical behind the dashboard. In this case, I am going to open one of the dashboards, preview dashboard and you'll see the my Excel has already populated with the Excel which comes with the dashboard, if you want to export this out of Xcelsius, please go to Data, Export, export dashboard, so you can export all these Excel files.

现在，我没有 Excel 模型，所以我打开模板。首先我先教你如何导出然后导入。我们打开模板后，（如果你是第一次安装 Xcelsius 的话，你可以把这些模板作为参考，以便理解仪表盘后的逻辑关系）这样的话，我将要打开一个信息窗，预览后你会发现我的 Excel 出现在信息窗口，如果你要从 Xcelsius 导出这些，就点击“数据”，“导出”，导出信息窗，你就可以导出这些 Excel 文件了。

I exported it and I can always see the file in my browser, so if you see the export example files here, so it's outside of my Excel. Similarly, if you want to import an excel model, you can always use the hot button up here, says import spreadsheet, or you can use short key or hot key, always Control+Shift+I or you can always go to data again, and import, click any excel file, click Open and it gonna open to the existing one.

我导出它以后我就可以从浏览器看见这文件，当你看见这些导出的示例文件后就说明它已经被导出了。相同的方法，如果你想要导入 Excel 模型，你可以一直使用上面的热键，叫做“导入电子表格”，或者你可以使用快捷键，一般都是按 Control+Shift+I,或者你可以再次点击“数据”，“导入”，点击 Exce 文件，快速的打开,它就会是那个你保存的那个。

It might give you a warning, because your components on your canvas might be mapped to different cells and the Excel which you are importing might be a different Excel. So if you are sure that it's the same Excel that you haven't change any cell values or cut and paste any cell values, go ahead and click yes or because you what you are doing you might lose all your work.

它可能会有警告，因为你的帆布界面的附件可能被联系到不同的单元格中，你导入的 Excel 可能是不同的单元格。所以如果你确定它们是相同的 Excel，你不需要改变单元格的数值或者剪切复制任何单元格数值，你就直接点击“是”，否则你正在做的所有工作可能丢失。

Click Yes, in this case, for I haven't change anything, so just click yes so I have the model here. So this is how you can easily export and import your excel models into or out to Xcelsius files, thanks for watching.

点击“是”，因为我没有改变任何东西，所以我直接点击“是”。现在我的模型回来了，这就是你如何简单的从 Xcelsius 中导出和导入你的 Excel 模型，谢谢观看。
