

Developing Web Services in SAP Web Application Server 6.40

Marc Chan
Web AS RIG, SAP Labs

Web Service Overview

- n What are Web services?
- n Why do we need them?

SAP NetWeaver Web Service Technology

SAP Web Application Server 6.40

- n Providing Web Services
- n Consuming Web Services

Web Services Definition

Web Services are

application functionalities

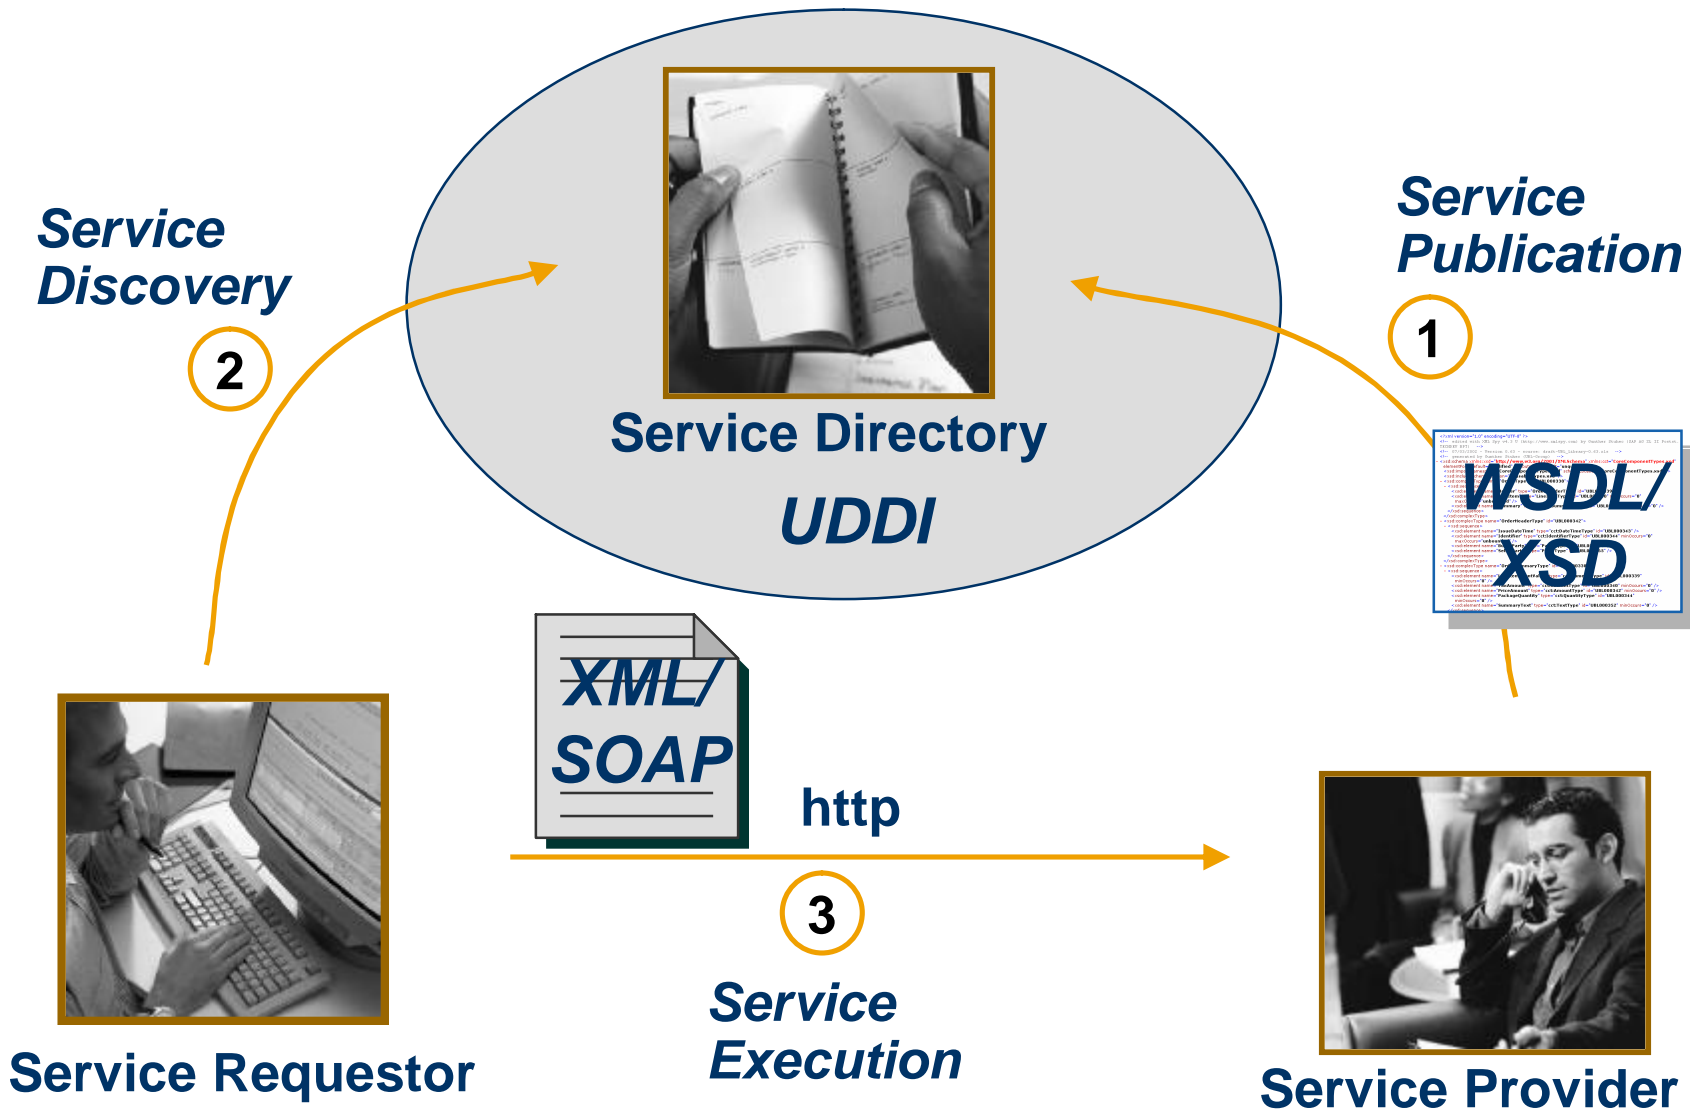

supporting *direct interaction*

by responding to *service requests*

based on open *Internet Standards*

Web Service Paradigm

Universal Description, Discovery and Integration (UDDI)

Describes how to advertise and discover a Web service

- n **Differentiates Web service provider, Web service and Web service type**
- n **Holds metadata that can be used to search for services (names, IDs, categories, types, etc.)**
- n **Specifies the interface for Web service registries**

UDDI Business Registry

- n *The* **directory for Web services on the Internet**
- n **Publicly available, free of charge**
- n **Operated by SAP, IBM, Microsoft, and NTT Communications**
- n **UDDI Version 3 Beta available now**
- n **SAP's node at <http://uddi.sap.com>**

Web Service Description Language

Describes the basic characteristics of a Web service

- n **Supported operations and their data format** e.g. xCBL Order
- n **Supported protocols** e.g. SOAP
- n **Network address** e.g. <http://a.com/order>

Further information

- n **Working Group:** <http://www.w3.org/2002/ws/desc/>
- n **Specification:** <http://www.w3.org/TR/wsd12/>

WSDL Structure (simplified)

```
<?xml version="1.0" encoding="utf-8" ?>
<definitions>
  <types>
    ... <element name="qty" type="string"
           minOccurs="0"/> ...
  </types>
  <message name="POMessageIn">
    ... <part name="Quantity" type="qty"/> ...
  </message>
  <portType name="POPortType">
    <operation>
      ... <input message="POMessageIn" /> ...
    </operation>
  </portType>
  <binding name="SOAP" portType="POPortType">
    ... SOAP/HTTP binding definition ...
  </binding>
  <service name="OrderWineService">
    <port name="Order" binding="SOAP">
      <address
        location="http://www.dijan.fr/Order/" />
      </port>
    </service>
  </definitions>
```

What

- n A *portType* describes the abstract interface (Web service type) of the Web service
- n Each contained *operation* can have an *input*, an *output* and a number of *fault messages*
- n Different Messages are build from build-in or custom data types
- n Data types are defined using XML Schema

How

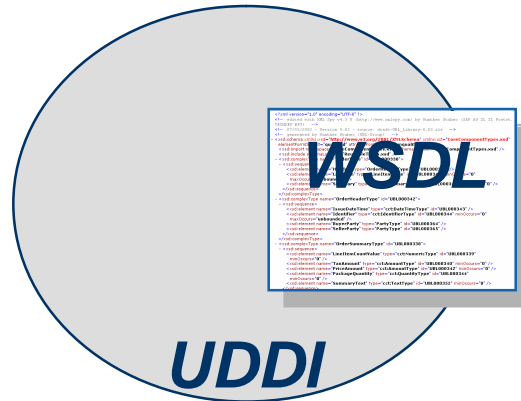

- n A *binding* specifies exactly one protocol for the operations of a portType

Where

- n A *port* defines the Web service endpoint by specifying a single network address

Implementing a Web Service Client

Service Provider

Service Requestor

1 Read WSDL

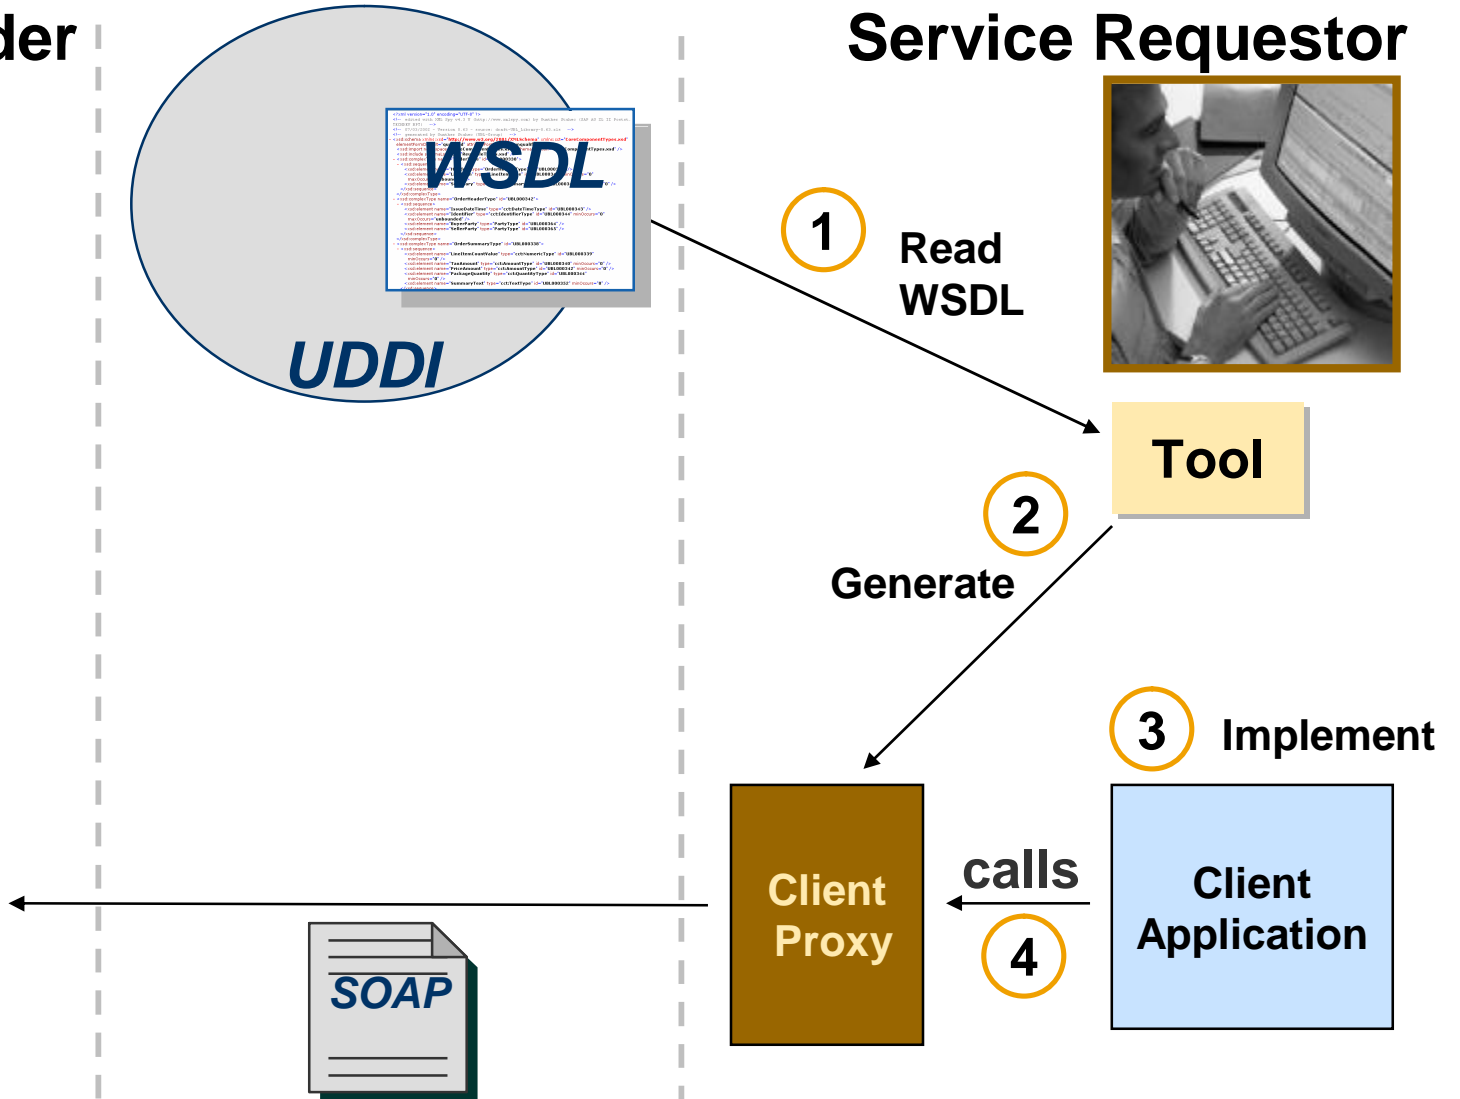

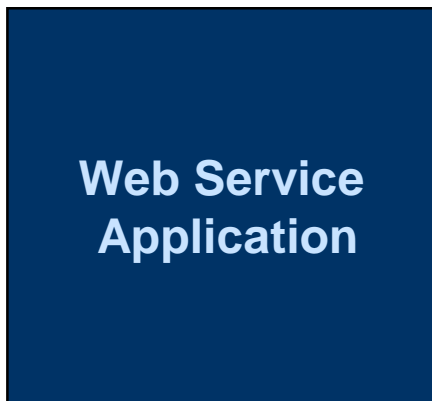

2 Generate

3 Implement

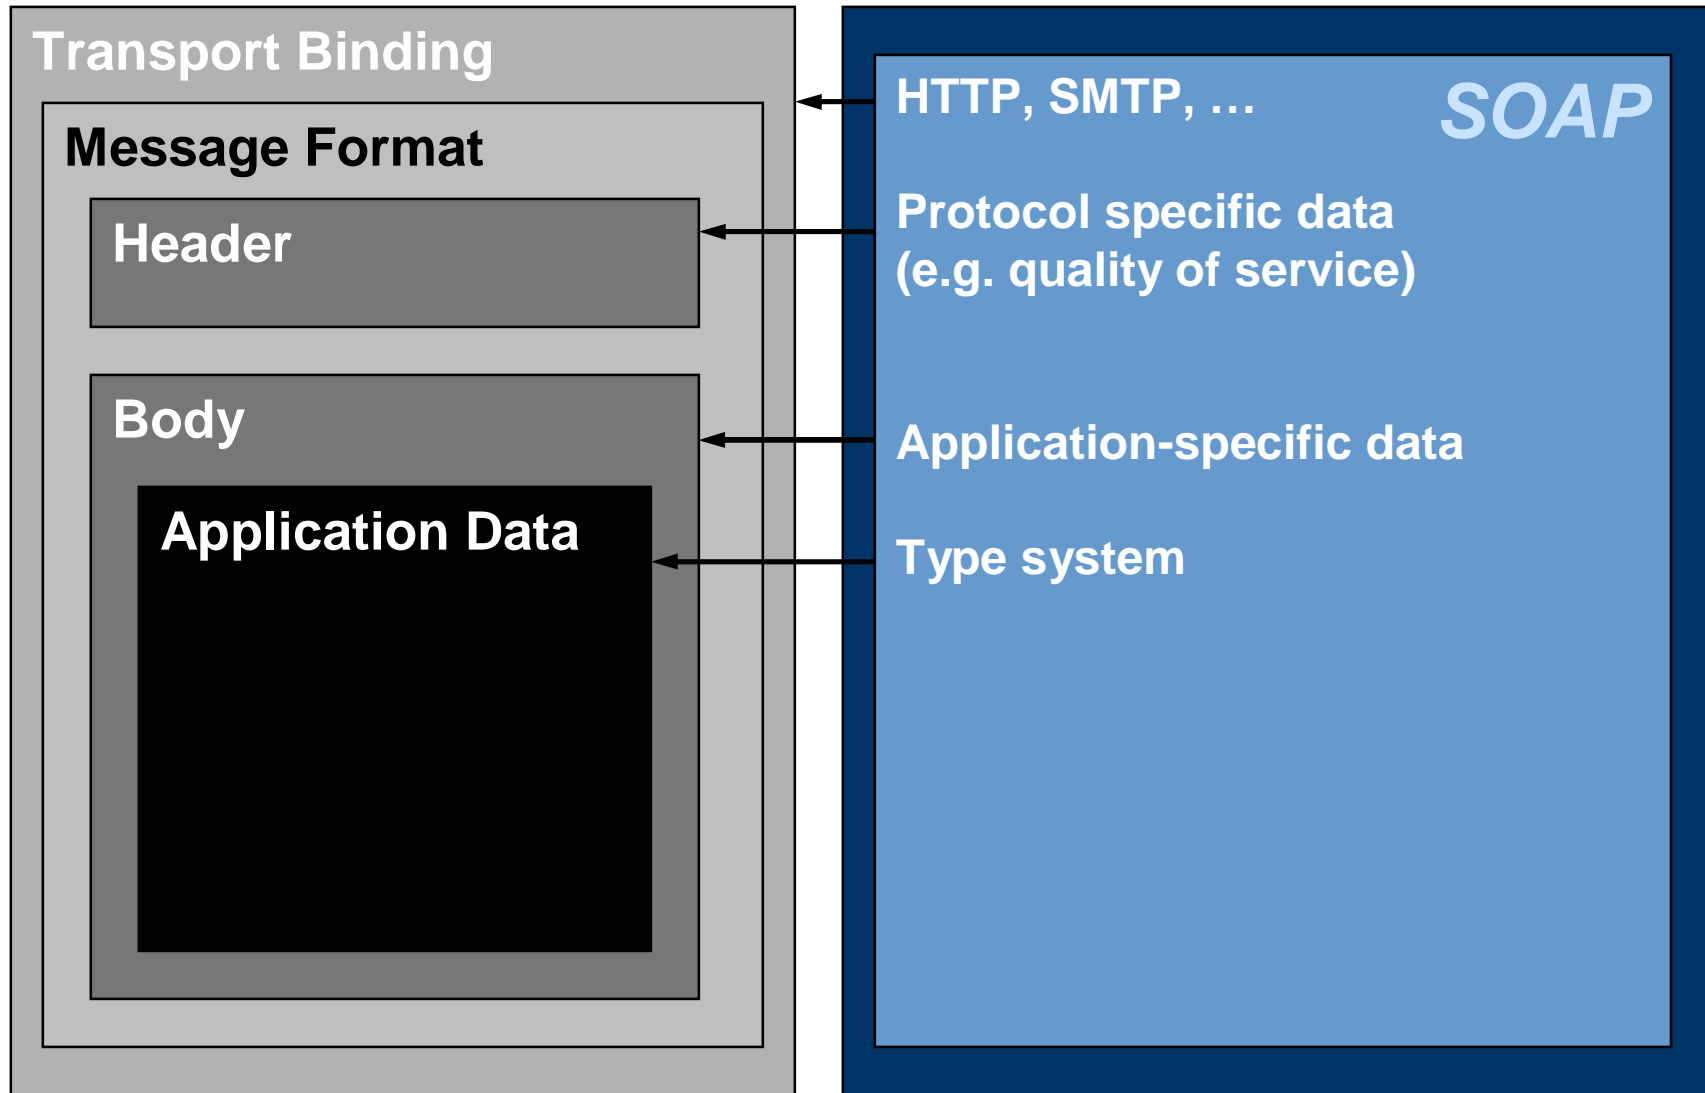

calls

4

SOAP Structure and Features

SOAP Example

```
<?xml version="1.0" encoding="UTF-8"?>
  <SOAP-ENV:Envelope
    xmlns:SOAP-ENV=http://schemas.xmlsoap.org/soap/envelope/
    xmlns:xsi=http://www.w3.org/2001/XMLSchema-instance
    xmlns:xs="http://www.w3.org/2001/XMLSchema">
    <Body>
      <Item>
        <Name> Burgundy First Class </Name>
        <Quantity> 12 </Quantity>
        <Unit> BOX </Unit>
      </Item>
      <Delivery address>
        <Contact> Marc Chan </Contact>
        <City> Palo Alto </City>
        <... other data ...>
      </Delivery address>
    </Body>
  </SOAP-ENV:Envelope>
```

Web Services Interoperability Organization (WS-I)

“Accelerating the adoption of Web services by reducing the cost associated with standards adoption”

Focus on Web service interoperability

- n **Select, integrate and profile existing industry standards**
- n **Provide implementation guidance and tools**

Deliverables

- n **Profiles specify conformance requirements for Web services**
- n **Testing Tools can be used to test profile conformance**
- n **Sample Applications demonstrate interoperable implementations**

WS-I Basic Profile 1.0

- n **Industry's common denominator for Web service applications**
- n **Covers HTTP, XML, XML Schema, SOAP, WSDL, and UDDI**
- n **Finalized August 12, 2003**

Fundamental Elements of the complete Web Service Solution

Open Technology Standards for Web Services

XML, WSDL, SOAP, UDDI, WS-I

Web Service Technology

SAP NetWeaver

Referent to business semantics

RosettaNet,
Spec2000,
HR-XML,
XBRL, IFX,
papiNet,
....

Web Service Overview

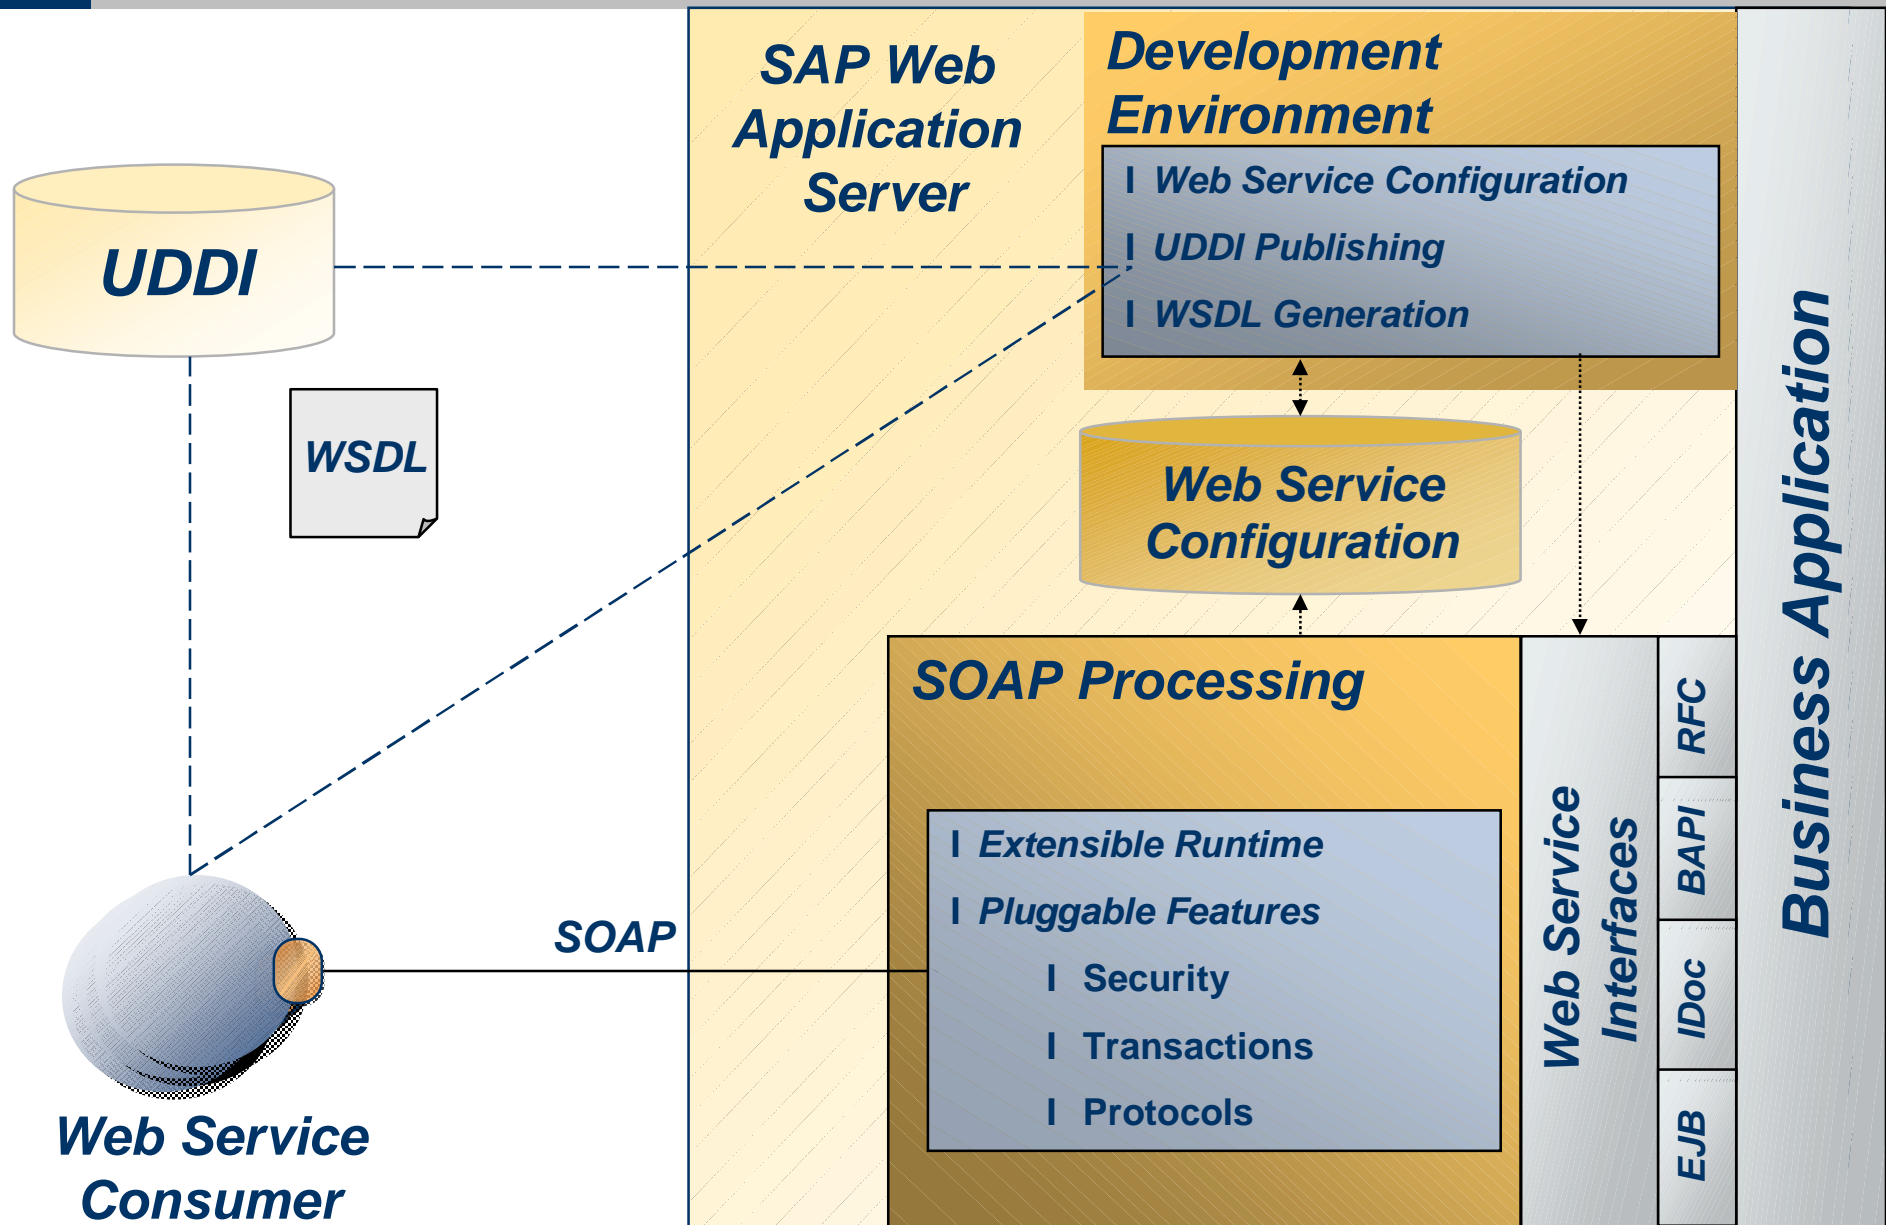

- n **What are Web services?**
- n **Why do we need them?**

SAP NetWeaver Web Service Technology

Providing Web services based on Open Standards

Consuming Web services based on Open Standards

Value-added Web Services Through XI

Web Service Overview

- n What are Web services?
- n Why do we need them?

SAP NetWeaver Web Service Technology

SAP Web Application Server 6.40

- n Providing Web Services
- n Consuming Web Services

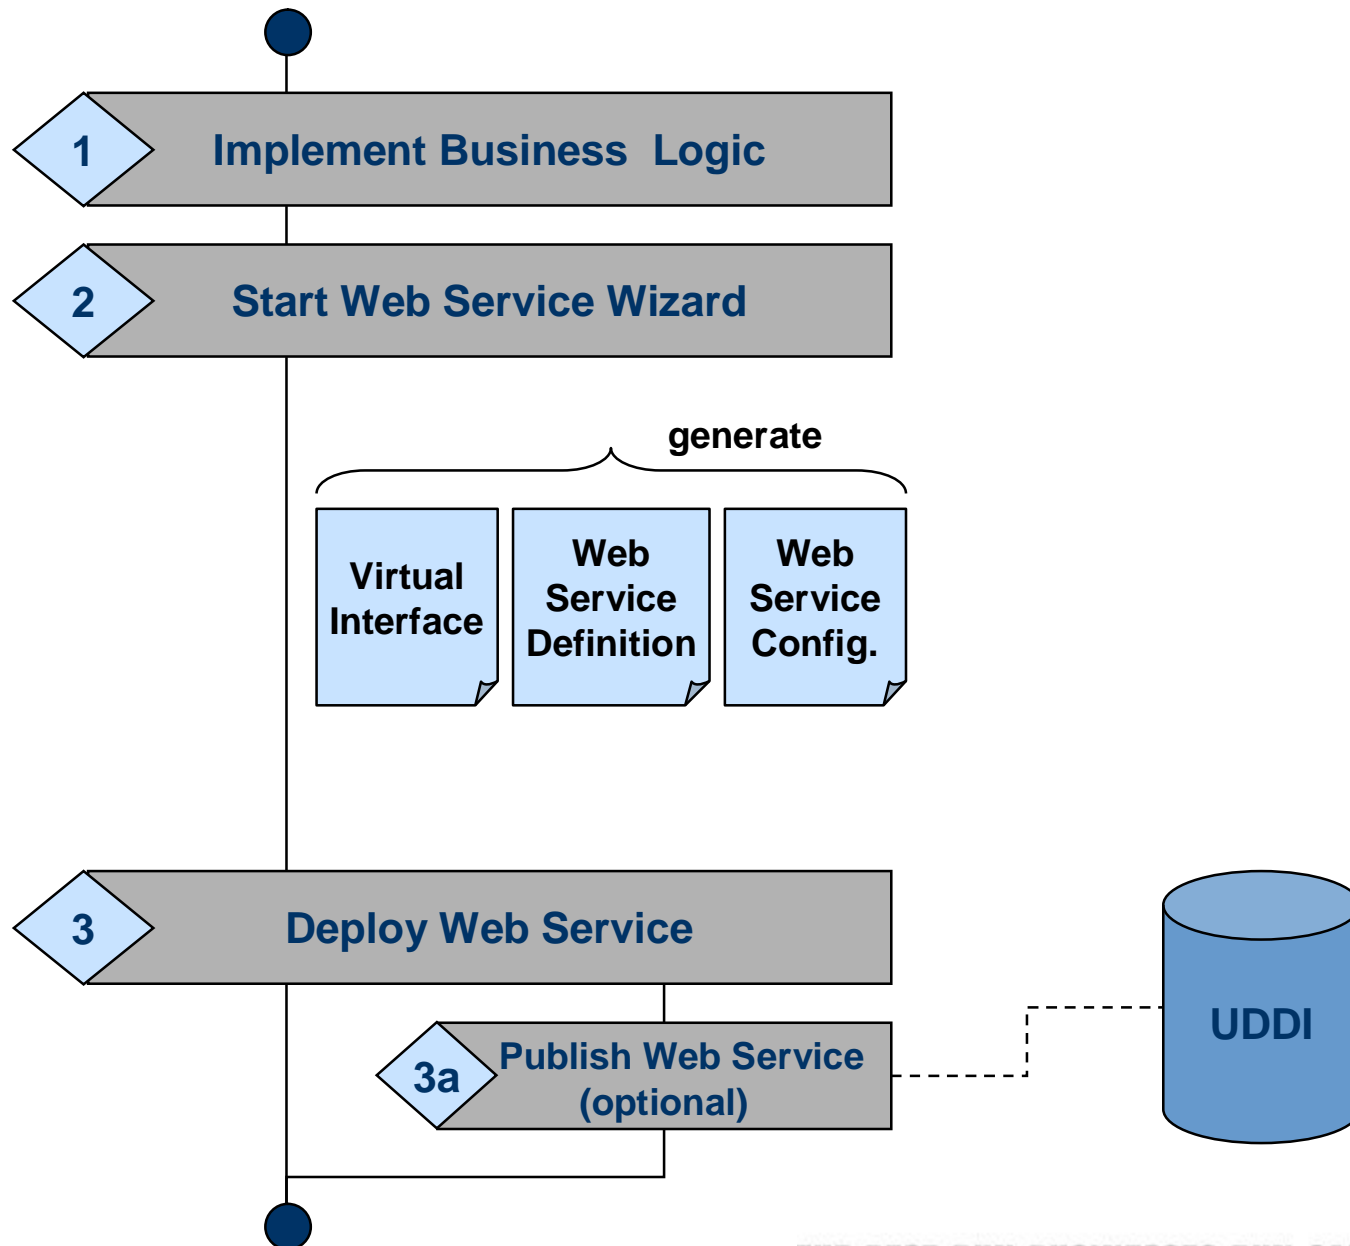

Creating a Web Service in less than 1 minute

- The Web Service Creation wizard

- n **proves that Web services are easy and out-of-the-box**
- n **allows to expose an existing endpoint as a Web Service with few mouse-clicks**
- n **Only shows the most important settings in the wizard**
 - u **Default values for other settings**
- n **hides technical details**
- n **implicitly creates all necessary objects**

Steps for the Web Service Wizard

Demo

Demo

Web Service Creation Wizard

All necessary files are created

- n **Virtual Interfaces**
- n **Web service Definition**
- n **Web Service Configuration**
- n **Enterprise Application Project (optional)**

The Web Service Homepage

- n is available for each deployed Web Service**
- n shows the documentation for the Web Service**
- n allows to retrieve WSDL descriptions in different styles**
- n allows to generate standalone proxies**
- n offers testing capabilities**

The Web Service Navigator

- n **is part of SAP NetWeaver Developer Studio**
- n **shows deployed Web services from different servers (SAP and Non SAP)**
- n **is the starting point for the Web Service Homepage**
- n **is the starting point for Web Service Proxy generation**

Demo

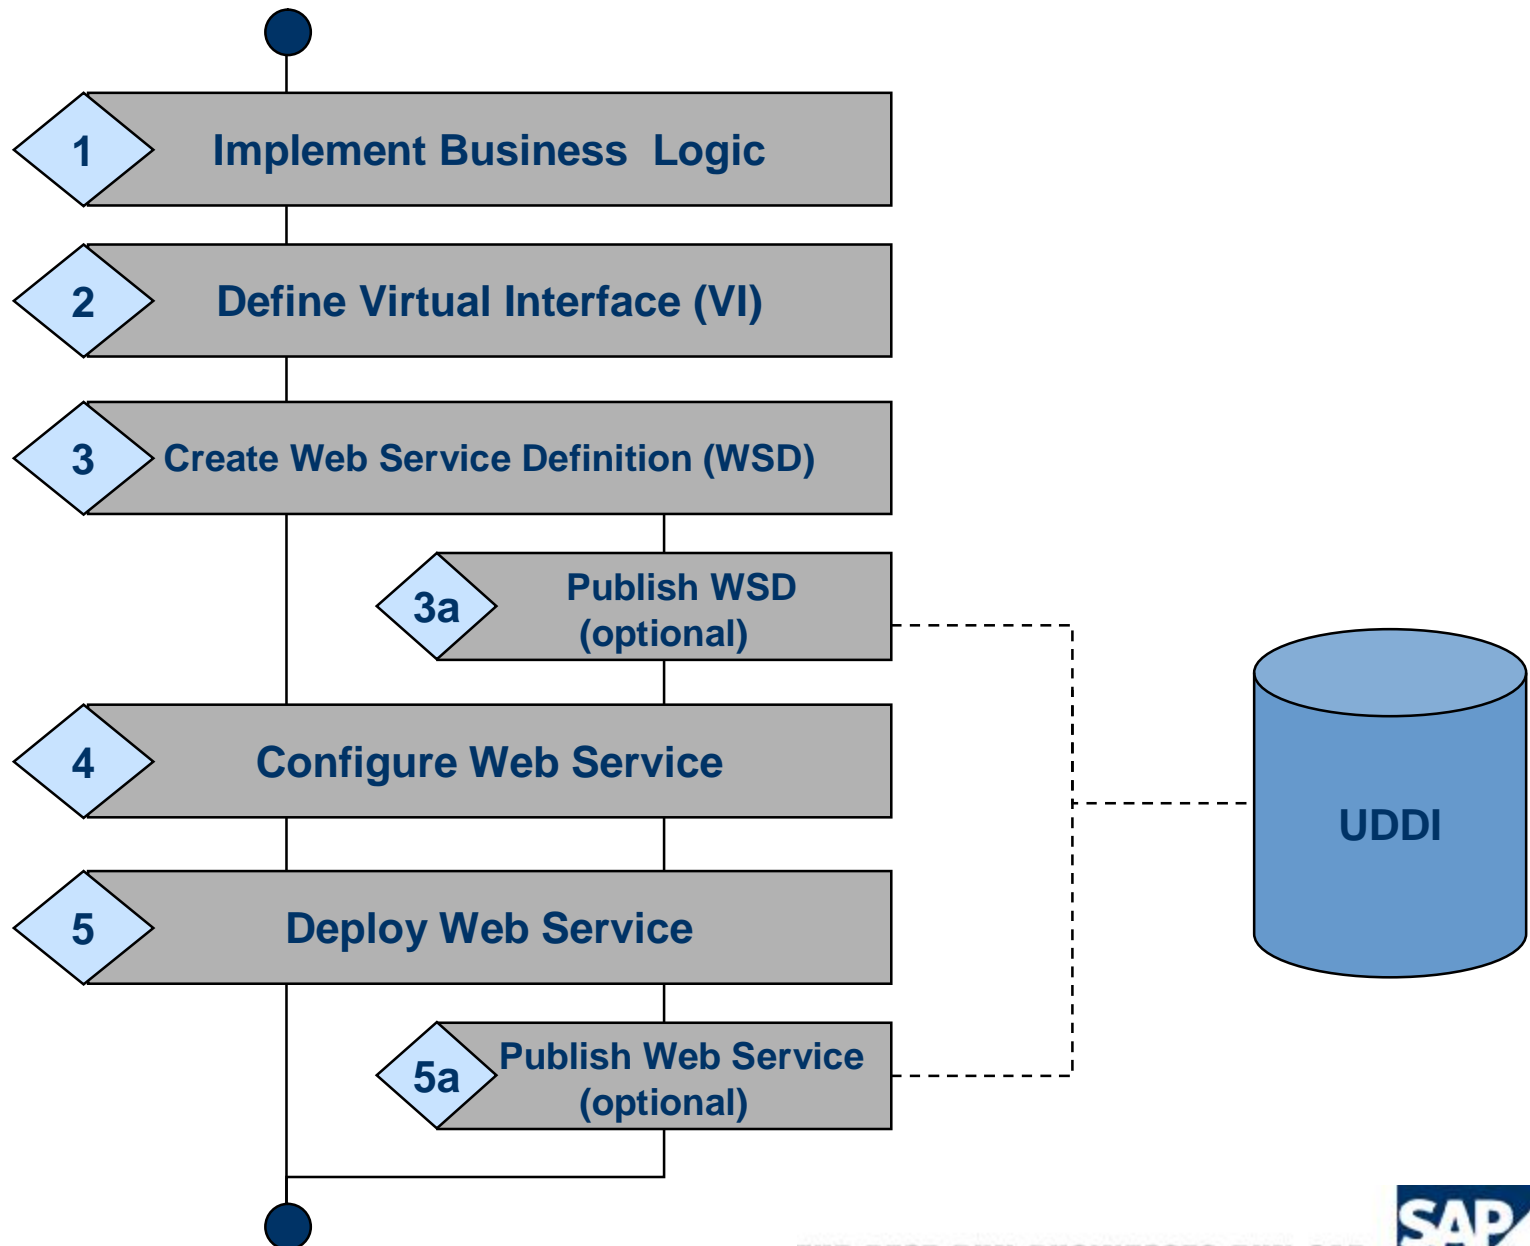

Web Service Homepage & Navigator

The Step-by-Step approach

- n **Create all objects by hand**
- n **Full flexibility and options**
- n **More expenses**
- n **... but still configuration only**

The Step by Step Approach

Support for Web Service Developers (2) - Tasks of a Web Service Developer -

Step 1: Implementing the business logic

- n **Supported by the standard IDE**

- n **Takes place in “Endpoint-specific” standard Tools**
 - u **Java: SAP NetWeaver Developer Studio**
 - u **ABAP: SE80**

Step 2: Definition of Virtual Interface

- n **Web Service Interface = Interface visible to clients (via WSDL, UDDI, ...)**
- n **Supported by the Web Service Infrastructure via *Virtual Interface Editor***
- n **A Virtual Interface**
 - u **provides abstraction from concrete implementation (=endpoint)**
 - u **allows to publish a “view” on existing implementations as Web Service Interfaces**
 - l **i.e. renaming, hiding of parameters/methods, default values**
 - u **allows to define how the Web Service Interface is represented in the SOAP message**

Demo

Virtual Interfaces

Step 3: Creation of Web Service Definition

- n **Web Service Definition = Assignment of behavior to a Web Service Interface via features**

- n **Motivation**
 - u a Web Service is not only described by its interface but also by its behavior with respect to
 - | stateless/stateful communication,
 - | transactional behavior,
 - | security requirements, ...

 - u **Idea:**
 - | describe this kind of behavior via abstract features
 - | leave it to the Web Service Configurator to assign technical protocols to these abstract features
 - | **Example:**

Feature:	Stateful
Technical Protocols:	Stateful via HTTP-Cookies, Stateful via URL-Extensions

Support for Web Service Developers (5)

- Tasks of a Web Service Developer -

n **Benefits**

- u **The same Web Service definition can be deployed to various application servers which may differ in their technical capabilities**
- u **Web Service Client implementations do not depend from technical server information**
 - l **Clients are generated based on implementation-independent Web Service definitions**
 - l **Technical details are configured separately in the Web Service Client Runtime**

n **Supported by the Web Service Infrastructure via**

- u **Web Service Definition Editor**
- u **UDDI Publication of Web Service Definitions**
- u **WSDL Generation for Web Service Definitions**

Demo

Web Service Definition

Support for Web Service Configurators (2) - Tasks of a Web Service Configurator -

Step 1: Technical configuration of a Web Service Definition

- n **Assignment of technical protocols to the abstract features**
 - u **based on the Web Service capabilities of the Application Server**

- n **Configuration of additional Web Service Runtime features**
 - u **Logging, Tracing, Monitoring**
 - u **Security Roles**
 - u **...**

- n **Supported by the Web Service Infrastructure via**
 - u **Web Service Configuration Editor**

Support for Web Service Configurators (3) - Tasks of a Web Service Configurator -

Step 2: Deployment of a Web Service

- n **Deployment of the Web Service archive to a specific application server**

- n **Supported by Web Service Infrastructure via**
 - u **Integration of Web Service deployment in J2EE Deploy Tool**

 - u **WSDL Generation for deployed Web Services**

 - u **UDDI Publishing**

 - u **Web Service Administrator**

Demo

Web Service Configuration and Deployment

Web Service Overview

- n What are Web services?
- n Why do we need them?

SAP NetWeaver Web Service Technology

SAP Web Application Server 6.40

- n Providing Web Services
- n **Consuming Web Services**

Step 1: Retrieve description of Web Service

- n **Retrieval of URL of WSDL description**
 - u either manually,
 - u or using UDDI Browsing

- n **Supported by the Web Service Infrastructure via**
 - u **Web Service Proxy Project**
 - u **UDDI Client Browser**

Step 2: Generate Web Service Client Proxy

- n **Start proxy generator based on imported WSDL Document**
- n **Supported by the Web Service Infrastructure via**
 - u **Web Service Proxy Project**

Step 3: Implementation of Client Application

- n **Use generated client proxies**
- n **Supported by the Web Service Infrastructure via**
 - u **the standard Java IDE**

Demo

Web Service Proxy Project
