

Network Segments and Network Sandbox

The following network segments are used on Factory:

Sandboxed Runtime Segment

- Applications provided by non-SAP customers and partners are started there.
- VMs inside **does not see** each other.
- VMs in other segments cannot see VMs in the Sandboxed Runtime Segment.

Services Segment

- Only Neo services are started there.
- VMs inside see each other.
- VMs in other segments can see only certain ports from the Services Segment.

Runtime Segment

- Only applications provided by SAP are started there.
- VMs inside see each other.
- VMs in other segments cannot see VMs in the Runtime Segment.

BigIP access

BigIP access (i.e. whether the app can be accessed through BigIP) is independent from the Segment in which the app is started.
