

# Triggering the Process Chains at Particular Date using Events

## Applies to:

SAP BW 3.5, Will also work on SAP BI 7

For more information, visit the [Business Intelligence homepage](#)

## Summary

This document discusses how to Trigger the Process Chain at particular Dates (every month), using Events.

**Author:** Surendra Kumar Reddy Koduru

**Company:** ITC Infotech India Ltd. (Bangalore/INDIA)

**Created on:** 14 March 2009

## Author Bio

Surendra Kumar Reddy Koduru is a SAP BI consultant currently working with ITC Infotech India Ltd (Bangalore/INDIA). He has over 4+ years of experience in various BW/BI implementation/Support projects.

**Introduction:**

This article describes how to run the Process Chain at particular Dates using Events. The requirement is every month we need to load the data (or Trigger the Process chain) on 8<sup>th</sup> and 11<sup>th</sup> day.

- This logic is useful in different scenarios also; here I'm taking Process Chain Scenarios.
- Using this logic, you can also automate some Programs/Function Modules etc...

**Requirement:**

We have some Y-Tables/Info Structures in ECC and every month 8<sup>th</sup> and 11<sup>th</sup> day the data will be updated in that Y-Tables/Info Structures. This is regular process and this process is automated in ECC. After that, we need to load the data from ECC to BW and need to automate this process using Events.

**How to Achieve:**

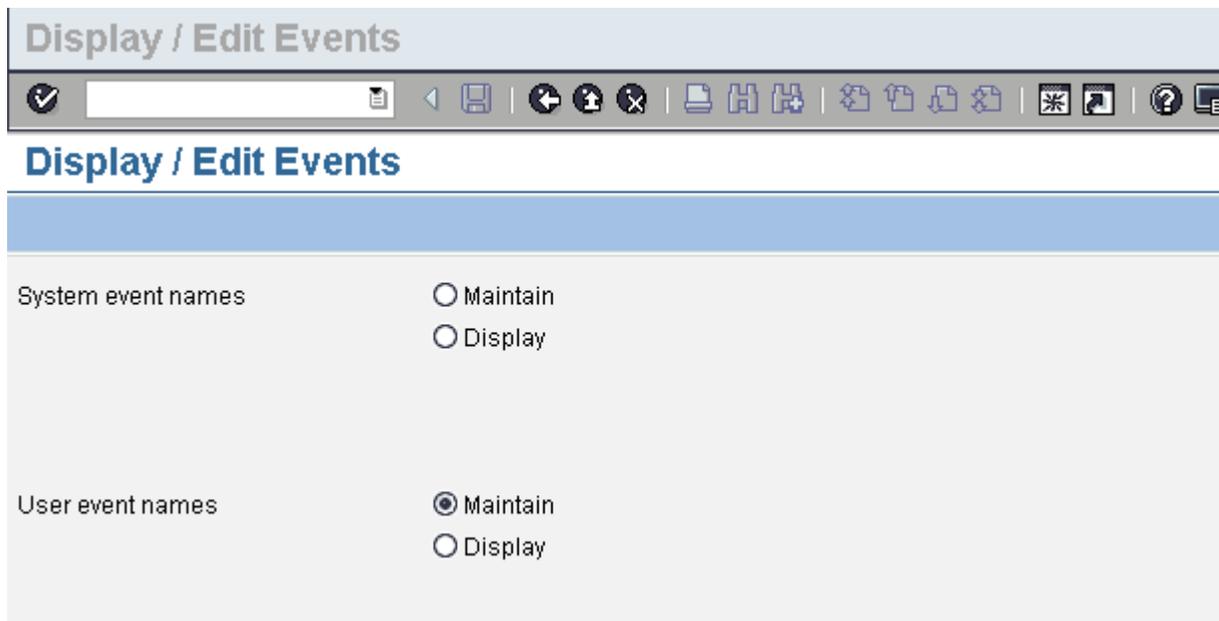

Using simple ABAP Program, we can do it.

This program will works based on System Date, it will check SY-DATUM with 8<sup>th</sup> and 11<sup>th</sup> day of every month and then it System date is matching with our 8<sup>th</sup> and 11<sup>th</sup> day then this program will trigger Event, so based on this event, our Process Chain will Trigger.

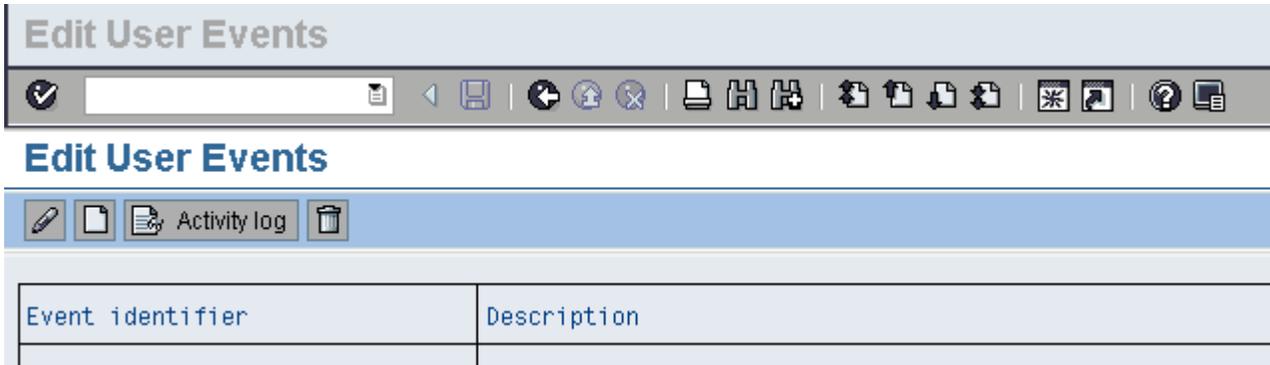

**Note:** You need to set this event in Process Chain.

**Event Creation:**

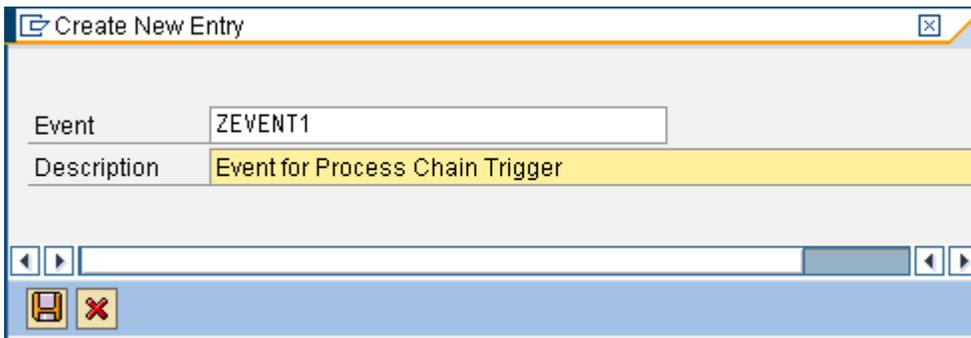

Go to SM62 and select **Maintain** and then Press Enter.

Click on Create Icon and Create New Event.

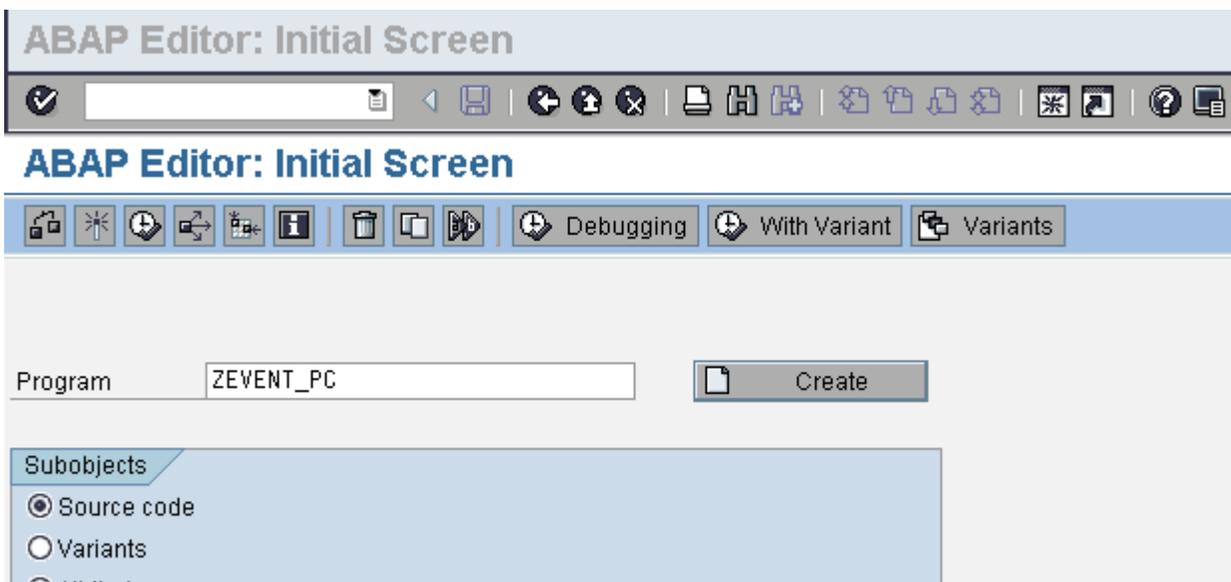

And give Event Name and Description like below and **Save** the Event.

We will use this Event in Process Chain.

Code:

Go to SE38 and Create a Program with name **ZEVENT\_PC**, Copy and Past the following Code.

## REPORT ZEVENT\_PC.

DATA: EVENTID LIKE TBTCJOB-EVENTID.

DATA: EVENTPARM LIKE TBTCJOB-EVENTPARM.

DATA: DT1 TYPE SY-DATUM,

DT2 TYPE SY-DATUM,

DT3 TYPE SY-DATUM,

MY1 TYPE /BI0/OICALMONTH,

MY2 TYPE /BI0/OICALMONTH,

DD1(2) TYPE N,

DD2(2) TYPE N,

DD3(3) TYPE N.

EVENTID = 'ZEVENT1'.

"We defined this event in SM62.

EVENTPARM = 'ZEVENTPARAM'.

"This We will set directly in Process Chain.

DT1 = SY-DATUM.

DD1 = '08'.

DD2 = '11'.

MY1 = DT1+0(6).

CONCATENATE MY1 DD1 INTO DT2.

CONCATENATE MY1 DD2 INTO DT3.

IF SY-DATUM = DT2 OR SY-DATUM = DT3.

CALL FUNCTION 'RSSM\_EVENT\_RAISE'

EXPORTING

I\_EVENTID = EVENTID

I\_EVENTPARM = EVENTPARM

EXCEPTIONS

BAD\_EVENTID = 1

EVENTID\_DOES\_NOT\_EXIST = 2

EVENTID\_MISSING = 3

RAISE\_FAILED = 4

OTHERS = 5

IF SY-SUBRC <> 0.

MESSAGE ID SY-MSGID TYPE SY-MSGTY NUMBER SY-MSGNO

WITH SY-MSGV1 SY-MSGV2 SY-MSGV3 SY-MSGV4.

ENDIF.

ELSE.

EXIT.

ENDIF.

**Process Chain:**

Go to RSPC and Select your Process Chain.

The screenshot displays the SAP Process Chain Maintenance Planning View for 'Data Loads for FNR Cubes'. The main area shows a flowchart with three steps:
 

- Start**: Data Loads to FNR Cubes
- Indexes**: Generated from LOADING ZPAK\_4BY5G1C6E0XUA1IUUVFZO9BBMC
- Load Data**: Delivery details for FNR - Full

 A left-hand navigation pane shows a tree structure with 'Process Chain' selected. The interface includes standard SAP toolbars and a title bar.

Double click on **Start** then and the Click on **Change Selections** and give the Event name, Parameter name and select Periodic Job and **Save**.

The screenshot shows the 'Maintain Start Process' dialog box. It contains the following information:
 

- Variant**: ZPV\_DATALOADS\_FNR
- Last Changed On**: From IBW\_SURENDF, On 06.02.2009, At 16:00:42
- Start Method**:  Direct Scheduling,  Start Using Meta Chain or API
- Action**: Change Selections

 The dialog includes a title bar, a toolbar, and a variant selection field.

Start Time

Immediate Date/Time After job After event At operation mode >>

Date/Time

After job At operation mode

After event

Event ZEVENT1

Parameter ZEVENTPARAM

Periodic job

Check [Save] [Cancel]

### Save ,Activate and Execute the Process Chain.

Then Run the Program **ZEVENT\_PC**, if the dates are matching with System date then the Event will trigger and then the Process chain will Trigger else Program won't trigger any Event and it will come out.

#### Note:

1. You can change the dates as per your requirement.
2. You set this Program (ZEVENT\_PC) execution in background on daily.
