Note:

*1 Apart from NCR, Teradata is only supported via customised gateways. Currently we only support such a gateway on the Sun.

*2 The interface which Holos uses to Red Brick has been changed to use the Red Brick ODBC Library API. This means to use Red Brick you will need version 5.1.2 or higher. The 5.0.14 version supports both the previous DB-Library and the new Interface, but we do not recommend using this version.. 5.1.2 only supports the new interface.

*3 Columns shown as 'not supported' implies that no testing has been carried out, if required please contact us.
